D. DAYMAKER® ADAPTIVE HEADLAMP UPGRADE KIT – PAN AMERICA™
See more road at night. Daymaker® Adaptive Headlamp technology utilizes motorcycle sensors to determine the lean angle of the bike and automatically projects additional light into corners to illuminate areas of the road that may be unlit by an LED headlamp without this technology. The system includes three LED elements per side in a separate lighting unit located above the main Daymaker LED headlamp. The LED elements illuminate in sequence based on motorcycle lean angle, at 8 degrees, 15 degrees and 23 degrees. Each element will fade on during the activation and off during deactivation, appearing seamless to the rider. The system functions when the headlight is in either high-beam or low-beam mode. Engineered by Harley-Davidson® for ideal fit and function. Original Equipment on the Pan America™ 1250 Special model

69202757
Fits '21-later RA1250 models. Original Equipment on RA1250S models.

E. DAYMAKER LED FORWARD AUXILIARY LIGHTS
These rugged auxiliary LED lights offer three-way function that will serve the adventure touring rider in any situation. Installed as a pair, each light has a three-beam, four-lens design within durable aluminum housing. In daylight these lights also make the motorcycle more conspicuous to other motorists. The factory-integrated design makes these lights easy to install and a perfect fit and look on the bike. Three-way functionality: Fog lights produce a wide pool of light directly in front of the motorcycle to light the edge of the road in low-visibility conditions. Driving lights punch light further down the road to augment headlight performance. Off-Road beams deliver 275-meter forward visibility and 50-meter side visibility to light up the trail (not street legal). Powder coated lightweight aluminum housing. High-impact hard-coated and anti-fog coated outer lens. Installation requires separate purchase of Auxiliary Light Installation Kit.

68000340
Fits '21-later RA1250 and RA1250S models equipped with Original Equipment Brush Guard or accessory Brush Guard P/N 49000192, and '14-later Touring models. Separate purchase of model-specific installation kit is required.

F. BOBBER SOLO SADDLE

How low can you go? This minimalist solo seat takes the stripped-down garage-built look about as far as you can go. The raw-edge leather pad is joined to the pan with brass rivets, and features matching brass "Milwaukee Since 1903" trim that will develop a rich patina with use. The Bar & Shield logo is embossed into the leather surface as a finishing touch. Easy to install, the bolt-on seat and a model-specific installation kit includes everything you need to get the bobber look. No cutting, welding or fabrication is necessary.

52000279 Black Leather.
52000276 Black Diamond.

NOTE: Some Harley-Davidson® seats are made of leather. Fine leathers or other natural materials WILL gain "character," such as wrinkles or wear, with age. This is normal. A fine, aged patina and character wrinkles are a sign of the extremely high-quality materials used to construct your seat or backrest. The appearance of scars or marks on the leather are a result of using natural leather panels and should not be thought of as an imperfection. Please use Harley-Davidson Leather Protectant P/N 93600034 to protect your investment.

ENJOY THE RIDE

The relationship between the seat, the handlebar and the foot controls has an enormous impact on the comfort, control and confidence you feel when riding your motorcycle. Once you've picked the bike, it's time to choose the options that match your ride to your personal dimensions.

For shorter riders, consider tailoring your fit by changing to a Reach® Seat, Mid Foot Controls and lowered suspension height.

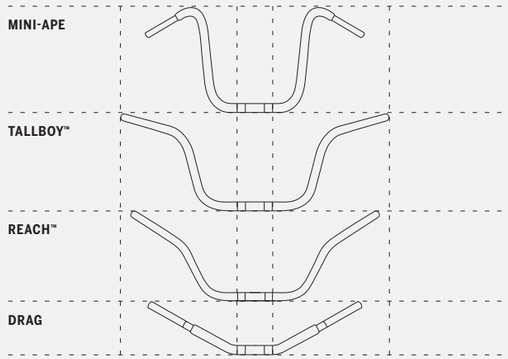

For taller riders, consider altering your ride by changing to a Tallboy® Seat and Tallboy™ Handlebars.

ESTABLISH YOUR POSITION AND FEEL

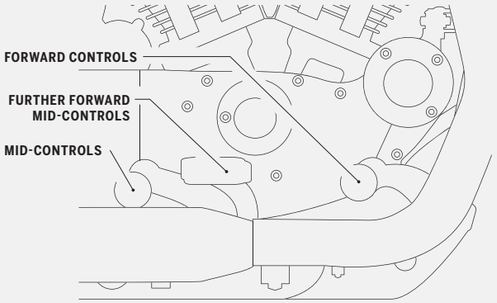

SEATS

Seat height and shape impact rider comfort, fit and confidence. Where the seat positions you relative to the foot controls, hand controls and the ground plays a major role in the quality of your ride.

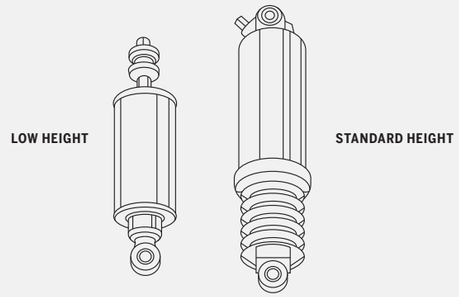

HANDLEBARS

Where the bar positions your arms, hands and wrists directly impacts how you feel on the motorcycle. Choose a bar that falls easily to hand, and does not pull you out of the seat when maneuvering.

FOOT CONTROLS

Repositioning your feet can relieve muscle tension, take pressure off the tailbone and reduce fatigue. The correct riding position can add hours of comfort and hundreds of miles to your daily saddle time.

SUSPENSION

Adjusting your motorcycle's ride height by raising or lowering the suspension is often the first step in fitting the bike to your stature. Being sure-footed at a stop can really increase your sense of confidence.

The appearance of scars or marks on the leather are a result of using natural leather panels and should not be thought of as an imperfection. PREMIUM ADJUSTABLE SUSPENSION

Your motorcycle's suspension defines the riding experience. Fast starts, smooth stops and tight control in the corners are all part of the vehicle dynamics controlled by the tuning of the front forks and rear shocks. Screamin' Eagle® Fully Adjustable Suspension components let you dial-in the ride, whether you're cruising the highway, carving up a country road or dodging city potholes.

1 COMPRESSION ADJUSTER

Fine-tunes suspension to control the upward wheel movement when hitting a bump

Adjusts the speed at which the suspension compresses

Critical for balancing ride quality and suspension bottoming

2 REBOUND ADJUSTER

Fine-tunes the downward wheel movement after riding over bumps or potholes

Adjusts the speed at which the suspension returns from extension

Critical for balancing ride quality and suspension bounce

3 PRELOAD ADJUSTER

Critical to setting the proper suspension travel to soak up large potholes and absorb large bumps

Adjusts for rider sag–the amount the suspension drops under the weight of the rider and cargo

B. PREMIUM RIDE EMULSION SHOCKS*

These fast shocks offer enhanced compression and rebound damping control when compared to typical twin-tube shock absorbers. The nitrogen gas charged shocks resist oil aeration and work with the internal valve stack to provide superior damping control in the twisties. The large pistons and low viscosity high-performance oil allow these shocks to react quickly to impacts and keep the tires tracking the road surface. With the addition of urethane bumpers, you get a controlled ride and minimized bottoming harshness. Kit includes left and right shock and preload adjustment spanner wrench.

54000077 Low-Profile.
Fits '04-'15 XL models (except XL883, XL883R, XL1200R and XL1200T).

***WARNING:** Installation of any accessory suspension components may affect cornering clearance and jiffy stand operation. This could distract the rider, causing loss of control and death or serious injury.

G. REAR SET FOOT CONTROLS – SPORTSTER MODELS

SPORTSTER® FOOT CONTROLS
A long stretch to the controls or a knees-high cramped riding position puts strain on your body after even a short ride. Repositioning your feet on the controls relieves muscle tension, takes pressure off the tailbone, and reduces rider fatigue. Where your feet contact the controls can often determine how many miles you can put on in a day.

Many Sportster® models can be equipped with the following foot control configurations:

MID CONTROLS:
Original Equipment on some models, Mid Controls position the feet below the knee for a sporting riding posture.

STANDARD FORWARD CONTROLS:
Places the legs for a "feet-in the-wind" laid-back profiling posture.

FURTHER FORWARD MID CONTROLS:
Achieves a comfortable foot-down riding position for the taller rider.

E. STANDARD FORWARD CONTROL KIT*
Add the stretched-out look and extended riding position to your Sportster model. The complete kit includes all hardware necessary to convert your Sportster model from mid controls to forward controls. Available in your choice of finishes, these forward controls add style and long range comfort. (Footpegs and shifter peg not included.)

Fits '14-later XL models. Requires separate purchase of stock or accessory rider position footpegs with wear pegs that fit '14-later XL1200 models.

50700020	Chrome with Black Peg Bracket.
50700021	Black.

33395-06A	Chrome.
33397-07A	Black.

F. FURTHER FORWARD MID CONTROL KIT
Feel a little cramped when your feet are placed on the standard-location mid controls? This kit repositions the controls 3.0" forward of the stock location, eliminating the "knees-high" riding attitude while maintaining a sporty upright riding posture. The forward location provides an open path for your feet to aid maneuvering the bike while parking and improves access to the jiffy stand for a shorter rider. Kit includes control mounts, brake and shift levers, brake rod, mini-footboards with wear pegs and all hardware necessary to convert your mid or forward control-equipped Sportster model.

50700028 Gloss Black.
Fits '14-later XL models.

G. REAR SET FOOT CONTROLS – SPORTSTER MODELS
Transform the on-street profile of your Sportster model. Moving the foot controls to a rear-mounted location takes the riding position from a relaxed cruiser to a solo, aggressive, curve-carving posture. When combined with a Clip-On or Clubman Handlebar, the resulting hands-forward and feet-back profile drapes the rider over the bike and makes you feel a part of the machine. This complete gloss black Rear Set Control Kit includes everything you need to move the brake and shift lever to the rear passenger position. This unique kit maintains the standard 1-down and 4-up shift pattern, and can be installed with the Original Equipment low staggered exhaust system. Kit reuses Original Equipment rider footpegs. Installation requires removal of passenger footpegs and footpeg mounts. For solo rider application only.

50700040 Gloss Black.
Fits '14-later XL883N, XL883L, XL1200CX, XL1200T, and XL1200X models and '18-later XL1200NS and XL1200XS models. Does not fit with Rail Collection Sprocket Cover P/N 34800032. For use with solo seat application only. Installation of Rear Set Controls requires removal of passenger foot pegs, therefore removal of the Original Equipment two-up seat and installation of a solo-only seat is required. See your Dealer for solo seat options.

***WARNING:** Installation of accessory Forward Control Kits may affect cornering clearance. This could distract the rider, causing loss of control, resulting in death or serious injury.

ENJOY THE RIDE

The relationship between the seat, the handlebar and the foot controls has an enormous impact on the comfort, control and confidence you feel when riding your motorcycle. Once you've picked the bike, it's time to choose the options that match your ride to your personal dimensions.

For shorter riders, consider tailoring your fit by changing to a Reach® Seat, Mid Foot Controls and lowered suspension height.

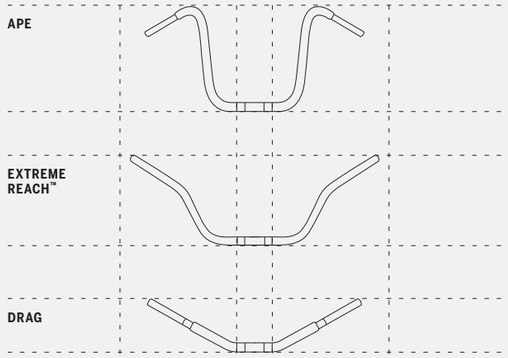

For taller riders, consider altering your ride by changing to a Tallboy® Seat and Extended Foot Controls.

ESTABLISH YOUR POSITION AND FEEL

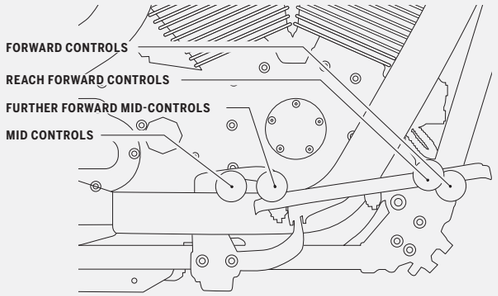

SEATS

Seat height and shape impact rider comfort, fit and confidence. Where the seat positions you relative to the foot controls, hand controls and the ground plays a major role in the quality of your ride.

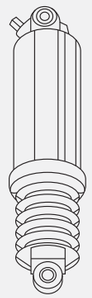

HANDLEBARS

Where the bar positions your arms, hands and wrists directly impacts how you feel on the motorcycle. Choose a bar that falls easily to hand, and does not pull you out of the seat when maneuvering.

FOOT CONTROLS

Repositioning your feet can relieve muscle tension, take pressure off the tailbone and reduce fatigue. The correct riding position can add hours of comfort and hundreds of miles to your daily saddle time.

SUSPENSION

Adjusting your motorcycle's ride height by raising or lowering the suspension is often the first step in fitting the bike to your stature. Being sure-footed at a stop can really increase your sense of confidence.

D. PREMIUM RIDE SINGLE CARTRIDGE FORK KIT*
This Single-Sided Cartridge Fork provides improved handling performance by keeping the tire in contact with the road surface. Tuned to work in concert with the Premium Emulsion Rear Shocks, the fork damping is controlled by a specifically calibrated piston and valve stack. Unlike typical orifice damping, the piston/valve system helps the cartridge fork achieve a linear damping force curve for consistent feel throughout the compression and extension of the front suspension. The cartridge allows the forks to react quickly to rough roads, inspiring rider confidence in sweeping corners. The compression piston provides excellent low-speed damping for a better rider feel, and the rebound spring provides a smoother feel during topping. The cartridge fork resists bottoming and dive, and the triple rate spring and oil lock allows the forks to absorb bumps even under hard braking – giving the rider more control while resisting wheel hop. A perfect addition during the installation of chrome or gloss black lower fork sliders, the kit includes fork pipe, cartridge, fork bolts, main springs and oil seals.

45400058
Fits '06-'17 Dyna® models (except FLD, FXDWG and '07-'08 FXDSE). Original Equipment on FXDLS models.

E. PREMIUM RIDE EMULSION SHOCKS*
Experience a comfortable and confidence-inspiring ride – no matter the pavement conditions – with Harley-Davidson® Premium Ride Emulsion Shocks. These fast-acting monotube nitrogen gas-charged shocks offer enhanced compression and rebound damping control when compared to typical twin-tube shock absorbers. The nitrogen gas charged shocks resist oil aeration and work with the internal valve stack to provide superior damping control in the twisties. The large 36mm pistons and low viscosity high-performance oil allow these shocks to react quickly to impacts and keep the tires tracking the road surface. You get a controlled ride and minimized bottoming harshness transmitted through the frame. The locking threaded adjustment lets you fine-tune the spring preload to your current riding conditions – whether a solo run on the back roads or a fully loaded two-up freeway tour – and urethane bumpers provide a softer feel if the shock bottoms under load. The beautifully finished shocks feature black-anodized billet top caps and black progressively-wound springs. Kit includes left and right shock and preload adjustment spanner wrench.

E. KING-SIZE NOSTALGIC H-D DETACHABLES WINDSHIELD

A windshield provides a barrier between the rider and errant bugs, discarded cigarette butts, flying debris and bad air. The shield manages airflow and wind blasts to create a pocket of still air for both rider and passenger comfort. But it's not just about function. This one-piece windshield features a nostalgic horseshoe-shaped outer brace that is the perfect match for your classic Harley-Davidson® motorcycle. Formed from hard-coated polycarbonate to resist scratching, this tall windshield provides maximum protection on the highway, but when you want to ride "naked," the detachable shield can be removed completely or reinstalled in seconds to match your riding mood. Kit includes mounting hardware.

57400329 21" Clear – Polished.
Fits '18-later FLDE, FLHC and FLHCS models. Windshield dimensions: Overall height – 27.0"; width – 21.5".

F. SPORT GLIDE® WINDSHIELD

Style meets function. This 5.5" tall Windshield stands 4" taller than the Original Equipment Sport Glide wind deflector to offer sport styling with a little greater wind protection. The taller shield moves more air up and over the rider to reduce helmet buffeting and wind-related fatigue. Harley-Davidson® windshields are formed of hard-coated polycarbonate for strength and scratch resistance and the light smoke tint complements any paint color.

57400360 5.5" Light Smoke.
Fits '18-'21 FLSB models.

TRANSPARENT PAINT GUARD KIT – SPORT GLIDE

This transparent skin is designed to protect your paint from bugs, boot scuffs and road debris. The crystal-clear material protects the paint without changing the overall look of your bike. And the optical properties of the material disguise minor scuffs and scratches. The application process is similar to that of tinted window film and the material can be removed and replaced when it is no longer cosmetically appealing. Scratches to paint can be expensive to repair but scratches to this film can be removed by applying a small amount of heat with a heat gun.

Fits '18-'21 FLSB models. Not recommended for use on denim or aftermarket paint.

ENJOY THE RIDE

The relationship between the seat, the handlebar and the foot controls has an enormous impact on the comfort, control and confidence you feel when riding your motorcycle. Once you've picked the bike, it's time to choose the options that match your ride to your personal dimensions.

For shorter riders, consider tailoring your fit by changing to a Reach® Seat, Mid-Foot Controls, and lowered suspension height.

For taller riders, consider altering your ride by changing to a Tallboy® Seat and Extended Foot Controls.

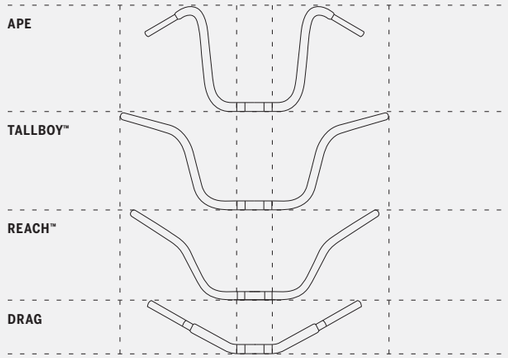

ESTABLISH YOUR POSITION AND FEEL

SEATS

Seat height and shape impact rider comfort, fit and confidence. Where the seat positions you relative to the foot controls, hand controls and the ground plays a major role in the quality of your ride.

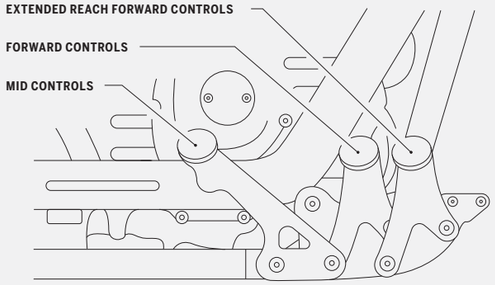

SEE PAGES 111-120

HANDLEBARS

Where the bar positions your arms, hands and wrists directly impacts how you feel on the motorcycle. Choose a bar that falls easily to hand, and does not pull you out of the seat when maneuvering.

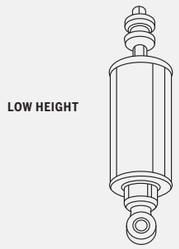

SEE PAGES 526-539

FOOT CONTROLS

Repositioning your feet can relieve muscle tension, take pressure off the tailbone and reduce fatigue. The correct riding position can add hours of comfort and hundreds of miles to your daily saddle time.

SEE PAGES 131-137

SUSPENSION

Adjusting your motorcycle's ride height by raising or lowering the suspension is often the first step in fitting the bike to your stature. Being sure-footed at a stop can really increase your sense of confidence.

A. BEVEL SOLO SEAT

You make zero compromises when it comes to style so you're not about to trade looks for comfort. And why should you? Now you can have the best of both worlds and no one needs to know. The Bevel Seats were created with all the attitude to suit your styling direction while providing all the function without the bulky look of a comfort seat. The low, slim profile of the Bevel Seats complement the lines of your bike while the carbon fiber-like inserts, chevron-shaped pleating, HDMC embroidered script and edgy aluminum button detail, that your back end won't feel, add a custom look. What nobody sees but makes any ride better is the lightweight and breathable 3D mesh material. 3D mesh absorbs the impact of even the worst roads even though the material is significantly thinner than comparable seats. Taped seams provide water resistance to keep your back end dry even when the seat is wet and, the "bevel" at the back of the seat adds to the rider's lower back comfort.

The open vent also provides cooling airflow to the rider at low speeds and in city traffic.

NOTE: Some Harley-Davidson® seats are made of leather. Fine leathers or other natural materials WILL gain "character," such as wrinkles or wear, with age. This is normal. A fine, aged patina and character wrinkles are a sign of the extremely high-quality materials used to construct your seat or backrest. The appearance of scars or marks on the leather are a result of using natural leather panels and should not be thought of as an imperfection. Please use Harley-Davidson® Leather Protectant P/N 93600034 to protect your investment.

BUILDING A BACKREST

A sissy bar upright and passenger backrest are the starting point to build a complete touring machine. The backrest provides long-range comfort and support and adds a feeling of control and confidence for the passenger. Start by selecting model-specific Docking Hardware, then choose a finish that matches your styling direction, determine the desired sissy bar height and finally select a backrest pad that complements your seat.

Seating – Low Profile

B. BRAWLER® SOLO SEAT
When it's time to go it alone, go in style. These premium quality cowhide leather solo saddles feature a smooth, sleek design that hugs the frame rails for a true custom look. The Brawler® seat's design places the rider "in" the bike for a low-slung riding position, and features a "kick-up" in the rear to hold the rider in place. The seating position is generally lower than stock, but not as far back as Badlander® or other low-profile seats. The top-grain leather seating surface and contoured foam padding provide a firm but luxurious feel. Seat does not fit with passenger pillions.

52000267

C. LEATHER BADLANDER® SEAT
The traditional Badlander seat's low and lean style sets the stage for your minimalist custom ride. The frame-hugging rider seat and the slim tapered passenger pillion visually stretch the bike and enhance the slammed look. The seat shape stays low along its entire length and follows the lines of the bike with minimal disruption, and delivers a riding position that is lower and generally farther back than the stock seat. Ideal for both short riders needing to be closer to the ground, or for tall riders who want to move back in the bike without sitting higher. This seat is wrapped in supple top-grain leather and finished with an embroidered Harley-Davidson script. Kit includes leather grab strap and mounting hardware.

D. BADLANDER SEAT
Clean smooth covers, subtle top-stitching and a frame-hugging profile add up to a statement only Harley could create. The low design delivers a reduced seat height that is ideal for riders who want the shortest possible reach to the ground, and the long and lean shape allows tall riders to move back from the hand and foot controls without sitting higher on the bike. Kit includes grab strap and all mounting hardware.

51397-06A

NOTE: Some Harley-Davidson® seats are made of leather. Fine leathers or other natural materials WILL gain "character," such as wrinkles or wear, with age. This is normal. A fine, aged patina and character wrinkles are a sign of the extremely high-quality materials used to construct your seat or backrest. The appearance of scars or marks on the leather are a result of using natural leather panels and should not be thought of as an imperfection. Please use Harley-Davidson® Leather Protectant P/N 93600034 to protect your investment.

This air bladder system is designed to reduce pressure points, provide shock absorption and reduce vibration. Unlike other mouth-inflated seat pads, the Road Zeppelin Pad features an easy-to-reach integrated hand pump and metered air release valve that permits quick and controllable adjustment. You can easily adjust the comfort and support while seated on the pad. The UV-stable and snag-resistant mesh cover allows air to circulate beneath the rider's body, reducing the temperature trapped between the rider and seat. A. WIND SPLITTER VENTED WINDSHIELD
Reduce helmet buffeting at speed. The Harley-Davidson® Detachables™ Wind Splitter Vented Windshield features an exclusive fingertip-adjustable center vent that reduces turbulence behind the windscreen. When open, the controlled airflow fills the negative pressure area behind the shield and helps to smooth the flow of air over the top of the screen and around the rider. The revised flow reduces helmet bobbing and neck fatigue so you can comfortably spend more time in the saddle. The open vent also provides cooling airflow to the rider at low speeds and in city traffic.

Engineered to provide the riding comfort of a larger windshield, this low-profile screen's contemporary contour sets it apart from the crowd. The shape keeps the windshield below your sight line so you don't look through bugs and road grime and the detachable design means you can ride without the shield when the mood strikes. The shield is formed of hard-coated polycarbonate for strength and scratch resistance and the dark-smoked finish reduces glare. The slim polished stainless steel brackets mount to the Original Equipment rubber isolated docking points for ease of installation and removal.

A. COOLFLOW™ FAN

Unlike traditional fan kits that try to cool the engine by blowing air across the cylinders and often onto your legs, the CoolFlow Fan Kit keeps the riders comfortable by pulling air away from the rear cylinder and exhaust pipe, and directing it toward the ground.

The CoolFlow Fan features switched On/Off/Auto operation on '17-later models and On/Off on '09-'16 models. In the "ON" mode, the fan is active at low speeds, and will turn off when the bike reaches 40mph. As speed drops, the fan turns back on at 35 mph. This logic program prevents the fan from cycling on and off during low speed changes. On '17-later models, the AUTO setting operates based on a combination of speed parameters and specific engine and ambient temperatures. Built to withstand the harsh motorcycle environment, the all-weather CoolFlow Fan is 100% waterproof and includes everything you need for installation. The plug-and-play design is integrated with the vehicle electronics, so "On/Off/Auto" fan operation is indicated in the odometer screen. Your dealer will enable this function in the Electronic Control Module (ECM) and you're ready to roll. Odometer fan status display feature availability varies by model and may not be available for your vehicle.

Keep your cool. This easy-to-install Oil Cooler features a thermostatically controlled fan that provides continuous flow of cooling air – even while the bike is idling in traffic or moving at low speed. The fan automatically engages when the engine oil temperature rises, and when in operation, the Fan Assisted Oil Cooler can provide up to a 50-degree drop in oil temperature. And unlike other models, the Harley-Davidson® Fan Assisted Oil Cooler utilizes weather-rated fans and electronics that are designed for the harsh motorcycle environment. Engineered as a bolt-on replacement for the Original Equipment oil cooler, the Fan Assisted Oil Cooler is plug-and-play compatible with your bike's wiring harness. No splicing or rewiring is required. ECM reprogramming by a Harley-Davidson Dealer is required to complete the installation.

D. PREMIUM OIL COOLER KITS – TOURING

This oil cooler was designed specifically for Harley-Davidson to out-perform all other coolers in the industry. The cooler features a unique "Turbulator" system that evenly distributes oil across the cooling chambers. The air fins are designed to efficiently dissipate heat. The oil cooler has been designed to simplify installation and enhance performance. The large heat exchanger provides excellent cooling efficiency. The kit features a one-piece adapter plate with integrated thermostat that allows oil lines to connect to the oil filter bracket. Thermostat activates at 185°F (85°C). Kit comes complete with mounting hardware and precut oil lines.

D. PREMIUM OIL COOLER KIT – '09-'10 TOURING (26155-09A SHOWN)

Inside View of Premium Oil Cooler With Turbulators

Turbulators disperse and mix oil inside cooler to provide more efficient cooling capabilities. The cooler oil is not allowed to remain along the boundaries of the flow tube as in conventional coolers.

Inside View of Conventional Oil Cooler Without Turbulators

Coolers without the Turbulator system allow oil to flow only in a straight path. Oil does not mix and the cooler oil remains along the outer boundaries, while the hotter oil remains along the center path of flow. Without the mixing effects of the Turbulators, the conventional oil cooler provides less efficient cooling capabilities.

COMFORT IS KING

The ability to spend hours behind the handlebars and rack up hundreds of miles without stopping is dictated by how you feel on your bike. The shape of the seat, the reach to the handlebars and the location of your feet are all major factors in how far you can travel in a day. But don't forget your passenger's needs — he or she has a stake in this ride as well.

THE RIDER & PASSENGER ENVIRONMENT

Accessories that impact the rider and passenger's physical contact with the motorcycle and the management of wind, temperature and road conditions should be your first consideration in building the ultimate touring machine.

ENJOY THE RIDE

The relationship between the seat, the handlebar and the foot controls has an enormous impact on the comfort, control and confidence you feel when riding your motorcycle. Once you've picked the bike, it's time to choose the options that match your ride to your personal dimensions.

For shorter riders, consider tailoring your fit by changing to a Reach® Seat, Standard Foot Controls and lowered suspension height.

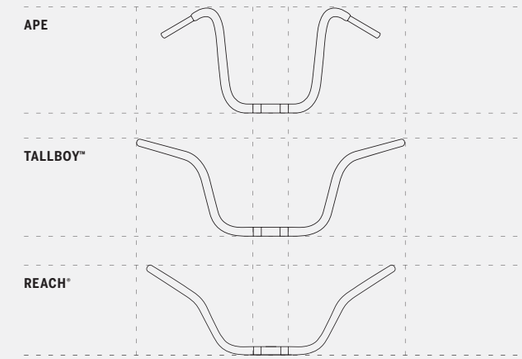

For taller riders, consider altering your ride by changing to a Tallboy® Seat and Extended Foot Controls.

ESTABLISH YOUR POSITION AND FEEL

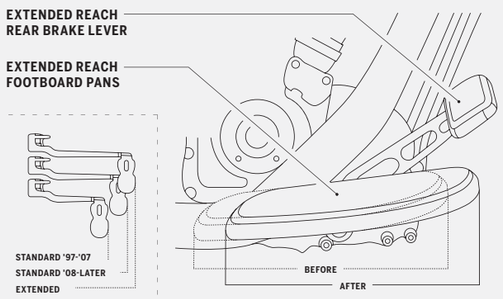

SEATS

Seat height and shape impact rider comfort, fit and confidence. Where the seat positions you relative to the foot controls, hand controls and the ground plays a major role in the quality of your ride.

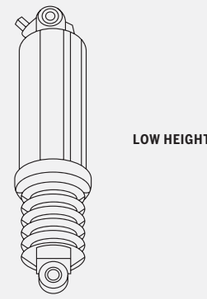

HANDLEBARS

Where the bar positions your arms, hands and wrists directly impacts how you feel on the motorcycle. Choose a bar that falls easily to hand, and does not pull you out of the seat when maneuvering.

FOOT CONTROLS

Repositioning your feet can relieve muscle tension, take pressure off the tailbone and reduce fatigue. The correct riding position can add hours of comfort and hundreds of miles to your daily saddle time.

SUSPENSION

Adjusting your motorcycle's ride height by raising or lowering the suspension is often the first step in fitting the bike to your stature. Being sure-footed at a stop can really increase your sense of confidence.

REACH® SEATS
Designed to position riders with a shorter inseam closer to the ground, Reach® Seats are shaped to place the rider in a comfortable and confident relationship to the hand and foot controls. The wide seating surface provides loads of support while riding and the narrow tapered nose brings your legs together for an easier reach to the ground at a stop. Reach Seats feature a stepped profile that provides back support and keeps the rider from sliding back during acceleration.

A. SUPER REACH SEAT
Get a little bit closer. Super Reach forward position seats are designed to move riders with a shorter inseam even closer to the controls and to bring the legs about 1.0" closer together so that your feet rest firmly on the pavement. The scooped bucket-shape saddle is enhanced with added back support padding to move the rider lower and forward.* The combination positions the rider closer to the hand and foot controls to offer both comfort and confidence. Seat can be equipped with optional rider backrest for added support and comfort.

*Measurements based on Original Equipment Electra Glide® seat:

B. REACH SOLO SEAT
From the custom metal Bar & Shield medallion to the sleek fast-back design, this seat is shaped to deliver the ergonomic position that a shorter rider needs. Sculpted and molded to ease the reach to the ground, this Reach Solo seat places the rider 3/8" lower and 1-1/4" forward when compared to the stock FLHX seat*. The narrow nose and the low overall height provides the rider with added confidence and control while the bike is at a stop or during parking maneuvers, while the generous seating width adds support for the long haul. And the seat's upturned tail moves you closer to the controls without confining you to one position. For maximum comfort and support, this seat is recommended for smaller-framed riders between 5'-2" and 5'-8" tall.

TALLBOY® SEATS
The correct riding position can help a tall rider sit comfortably on the bike and avoid leg cramps and back strain during a long day in the saddle. For riders with a longer inseam, a Tallboy® Seat will put you on the road to fatigue-free riding. Designed to move the rider up and back from the stock seating position, a Tallboy Seat can eliminate the knees-high riding position and effectively places the body for a natural arm and leg reach to the controls. Tallboy Seats feature a bucket-shaped design for added support and a wide seating surface to reduce pressure on the tailbone.

ROAD ZEPPELIN® AIR ADJUSTABLE SEATS
The open road. That's where we developed and tested the revolutionary comfort of the Road Zeppelin® Seat. This remarkable seat removes pressure points and hot spots by adjusting the amount of air contained in each bladder within the seat. Easy-to-reach rocker switches on the side of the seat control the built-in compressor, adding and bleeding off air with the quick push of a button to help relieve stress from the lower back, tailbone or lower extremities. On a long run, occasionally inflating and deflating the air bladders reduces the "numb butt" effect by improving the blood flow to the extremities. So grab a seat. And enjoy the ride.

A. ROAD ZEPPELIN AIR ADJUSTABLE SEAT
The Road Zeppelin seat's ergonomically friendly design combines a narrow front nose for ease of touching the ground at a stop with a wide seating surface for long-range rider and passenger comfort. Stay in the saddle all day. These Harley® Hammock Seats feature broad seating surfaces and a shallow bucket shape to distribute the weight and reduce pressure points. Beneath the 2" of traditional dual-density foam, the rider's weight is supported by a revolutionary fabric suspension system. The sling-like suspension system is integrated into the seat and acts like a hammock, providing 2" of suspension above the seat pan. This internal system prevents bottoming out and provides a 30% improvement in comfort and endurance over the long haul by sheltering the rider from pothole and highway expansion joint impacts. The generous seat length permits freedom of movement on long rides, making this seat a perfect option for taller riders.

A. HARLEY® HAMMOCK HEATED & COOLED SEAT

Extend and optimize your riding season thanks to cooling and heating technology built into this premium seat for Touring and Trike models. The electronic heating/cooling system is self-contained within the seat. The seat can be easily removed after unplugging a single cord. This seat offers industry-leading cooling performance, and the heating function has been improved to reach its selected temperature twice as fast as previous heated seats. The Hammock seat is our most-premium touring seat design, created for the rider who wants the ultimate in long-haul comfort. For the rider it features a sling-like fabric suspension system that acts like a hammock, providing two inches of suspension above the seat pan, topped with an additional two inches of traditional foam cushioning. This internal suspension prevents "bottoming out" and provides an improvement in comfort and endurance by isolating the rider from harsh road conditions. The passenger position features a multiple spring-board style suspension system along with two inches of traditional foam. This seat really improves comfort and reduces fatigue on long rides. Greater comfort reduces fatigue and extends the riding season in any climate. In testing with a baseline ambient temperature of 85 degrees the seat cover will cool down by 25 degrees in about 30 minutes, from your 98-degree body temperature to about 76 degrees. As you ride, the cooling function draws heat away from your body, which makes you feel cooler. Dual Zone Control: Rider passenger seating positions must use the same temperature mode (heat or cool) but can adjust the level to individual preference or switch the function off. Redesigned heating element reaches selected temperature in only seven minutes. Seam-sealed construction prevents rain or wash water from infiltrating the seat foam. No riding for hours on a squishy seat. Compatible with Rider Backrest Mounting Kit (P/N 52589-09A)

NOTE: Some Harley-Davidson® seats are made of leather. Fine leathers or other natural materials WILL gain "character," such as wrinkles or wear, with age. This is normal. A fine, aged patina and character wrinkles are a sign of the extremely high-quality materials used to construct your seat or backrest. The appearance of scars or marks on the leather are a result of using natural leather panels and should not be thought of as an imperfection. Please use Harley-Davidson® Leather Protectant P/N 93600034 to protect your investment.

The robust chrome Center Stand attaches directly to the frame and does not reduce the lean angle. Designed to work with all Original Equipment suspension configurations and with Profile® suspension lowering kits, the adjustable feet can be set to lift the rear tire clear of the pavement, or to keep the rear tire on the ground for reduced lifting effort. PREMIUM ADJUSTABLE PERFORMANCE SUSPENSION

Step up to the ultimate in handling and ride quality. Screamin' Eagle®/Öhlins® Remote Reservoir Rear Shocks for Harley-Davidson® Touring models were designed for Screamin' Eagle® Factory Team race bikes and it's what the Wymans had on their Road Glide® Special motorcycles. Fully adjustable for preload and compression/rebound damping, with a remote reservoir for optimal performance and style. Use these shocks to dial in your ideal combination of handling and ride, for the street or the track. Ride like a winner.

1 COMPRESSION ADJUSTER

Fine-tunes suspension to control the upward wheel movement when hitting a bump

Adjusts the speed at which the suspension compresses

Critical for balancing ride quality and suspension bottoming

2 REBOUND ADJUSTER

Fine-tunes the downward wheel movement after riding over bumps or potholes

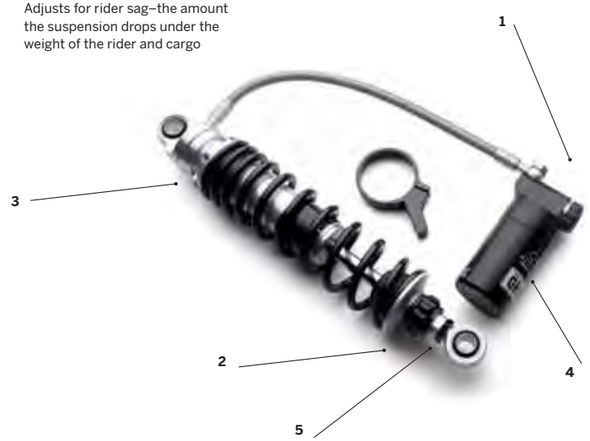

Adjusts the speed at which the suspension returns from extension

Critical for balancing ride quality and suspension bounce

3 PRELOAD ADJUSTER

Critical to setting the proper suspension travel to soak up large potholes and absorb large bumps

Adjusts for rider sag–the amount the suspension drops under the weight of the rider and cargo

4 REMOTE RESERVOIR

Remote reservoir keeps the shock oil cooler to maintain damping performance

Internal bladder separates the oil from the nitrogen gas to reduce cavitation during aggressive riding

5 LENGTH

The shock length is adjustable from +8mm or -2mm over the standard height.

Paint Protection

TRANSPARENT PAINT GUARD KITS
This transparent skin is designed to protect your paint from bugs, boot scuffs and road debris. The crystal-clear material protects the paint without changing the overall look of your bike. And the optical properties of the material disguise minor scuffs and scratches. The application process is similar to that of tinted window film and the material can be removed and replaced when it is no longer cosmetically appealing. Scratches to paint can be expensive to repair but scratches to this film can be removed by applying a small amount of heat with a heat gun.

SCREAMIN' EAGLE® PRO STREET TUNER

The Screamin' Eagle® Pro Street Performance Tuner is designed to simplify management of engine operating parameters as performance modifications are made. Once installed, the kit will allow you to adjust key parameters or simply upload the latest Engine Control Module (ECM) calibrations to match your bike's state-of-tune. Start with a high-flow air cleaner and Street Performance mufflers and upload the calibration that provides the best performance mix. Add additional Stage Upgrades later, and you simply upload the proper ECM calibration to match the model and hardware. Plus, you have free online access to the latest factory calibrations.

Ideal for real-world street performance applications, the Pro Street Tuner provides the adjustability to account for bike-to-bike variation and for changes to cams, heads, intake and exhaust while maintaining closed-loop fuel control for fuel economy in the part-throttle operating range. Unlike other aftermarket tuners, the Screamin' Eagle Pro Street Tuner actually talks directly to your motorcycle's ECM and re-programs the motorcycle's operating system. It isn't a piggyback system that tries to fool the ECM into adding more fuel or changing the ignition timing. The Pro Street Tuner plugs into the bike's data port, so no splicing or under-seat hardware is required.

After you upload the proper ECM calibration, dial it in with the Smart Tune function. The guided Smart Tune process walks you through the process to find the right calibration for your build, set the tuner to a data collection mode and then allows you to incorporate the data after the ride with just a few clicks. The ECM calibration is then custom fit for your bike. The module will store up to 15 minutes of run-time data information that can be downloaded to your PC, allowing the rider or technician to view and evaluate the bike's air/fuel ratio, O_2 sensor readings, engine speed and temperature, RPM and vehicle speed, throttle position, spark advance and many more performance characteristics. The Vehicle Communications Module (VCI) will also record and display service codes for troubleshooting and diagnostics. The kit includes the VCI module and unlimited access to the latest software updates and calibrations available from Screamin' Eagle. Tuner Cable kit sold separately.

The Pro Street Tuner software includes impressive features:

- A guided Smart Tune process to enable quick navigation through the software, whether you are new to tuning or an experienced user.
- Smart Tune Live – a dynamic and visual method to track and capture engine data simply by running the vehicle through a range of RPM and throttle positions. This feature reduces the time to modify existing VE (Volumetric Efficiency) tables, which are then analyzed and tuned. Smart Tune Live works on models with factory-installed O_2 sensors only.
- Adjustability to Spark Advance, Throttle Progressivity and Volumetric Efficiency to custom tune the performance combination.
- 50-State U.S. EPA compliant.

The Pro Street Tuner permits tunability to optimize performance and drivability without compromising fuel efficiency, emission levels, engine durability, or 50-State U.S. EPA compliance. And unlike other race tuners or engine controllers, the Screamin' Eagle Pro Street Tuner does not impact your Harley-Davidson® factory warranty coverage.

A. SCREAMIN' EAGLE SMART TUNE PRO AUTOMATIC TUNING MODULE

A. SCREAMIN' EAGLE® SMART TUNE PRO AUTOMATIC TUNING MODULE*
Smart Tune PRO works with the Screamin' Eagle® Pro Street Tuner to automatically adjust your bike for the combination of performance components, climates and vehicle load conditions you are operating in. You just install the upgraded wide-band oxygen sensors in the exhaust headers, download the calibration that the Screamin' Eagle engineers have developed as a starting point, then simply drive down the road and let Smart Tune PRO do the work.

Smart Tune PRO constantly monitors the operating parameters of your motorcycle, and automatically adjusts the bike's Electronic Control Module (ECM) to maximize performance in your current riding conditions. Smart Tune PRO utilizes wide-band O_2 sensors that read oxygen levels in the exhaust stream to determine the optimum air/fuel ratio your bike needs at this very moment. Smart Tune PRO analyzes the data and automatically makes real-time tuning adjustments to the ECM. Unlike the standard narrow-band O_2 sensors that only provide feedback in the part-throttle cruising range, the wideband sensors can read and adjust tuning throughout the part throttle cruising and full-throttle acceleration operating range.

It is fully factory supported, and optimized to maximize performance while maintaining drivability and engine longevity. Smart Tune PRO is 50-State EPA compliant and does not impact the H-D™ factory warranty. Kit includes the Smart Tune PRO module with plug-in wiring harness, two M18 wide-band O_2 sensors and access to free software updates, future calibrations and free online training modules. Screamin' Eagle Pro Street Tuner and model-specific installation hardware is sold separately.

MILWAUKEE-EIGHT® POWERTRAIN

Screamin' Eagle® Stage upgrades offer complete street-compliant performance configurations engineered to generate specific torque and horsepower gains. Eliminating all the guesswork and trial-and-error testing normally associated with engine modifications, Stage upgrades include everything you need to enhance your bike's performance. Start with the foundation, the Stage I upgrade, then choose from Stage II, III or IV depending on your performance goals, budget and riding style.

STAGE I

INTAKE + EXHAUST + TUNING

The easiest and most cost effective step to improve your motorcycle's performance is to increase the airflow into and out of the engine. A high-flow air cleaner and system-matched slip-on mufflers provide horsepower and torque improvements you can feel throughout the RPM range, and serve as the core components for all performance upgrades. ECM calibration is required to tune the fuel flow and timing required to accommodate the improved airflow.

Stage I upgrade can be installed without engine disassembly. No special tools are required. Requires ECM tuning.

Street legal and/or street compliant statements refer to product meeting 50-State emissions and noise standards in the United States. The street legal and/or street compliant statements may not apply to markets outside of the United States.

STAGE II

STAGE I + CAM UPGRADE

Adding performance cams to a Stage I equipped bike is the next step to improved performance. Cam choices allow you to tailor the engine's performance to your specific needs. A torque cam offers on-demand throttle response from low- to mid-RPM at cruising speed. A power cam targets high-RPM, wide-open throttle response that keeps pulling right up to the redline. ECM calibration tuning is required to accommodate the increased valve timing, and performance valve springs may be required for high-lift cams.

Stage II upgrade requires minor engine disassembly to replace the cam. Adjustable pushrods allow cam installation without removing the rocker box. Special tools and ECM tuning are required.

STAGE III

STAGE I + CAM, BIG BORE CYLINDERS & PISTONS

The next step on the performance journey is to build a bigger engine. An increase in engine displacement allows the engine to swallow more air and fuel, a higher compression piston squeezes the air/fuel into a more volatile mixture, and when combined, generates more power when ignited. A displacement and compression increase provides torque increases throughout the entire RPM range with a 15-25% improvement in the mid-range power. ECM calibration tuning is required to adjust fuel flow and timing to accommodate the increased displacement.

Stage III bolt-on upgrade requires removal of the engine's top end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

STAGE IV

STAGE I + CAM, BIG BORE CYLINDERS, PISTONS, CYLINDER HEADS & THROTTLE BODY

To maximize the impact of the increased displacement gained with Stage III updates, the addition of free-flowing ported cylinder heads and a big bore throttle body top off the performance build. Designed to satisfy the high-RPM, throttle-twisting rider, the Stage IV update delivers 20-30% increase in power that keeps pulling right up to the redline, without sacrificing mid-range torque. ECM calibration tuning is required to add more fuel, and a higher-lift cam may be required to deliver maximum power.

Stage IV bolt-on upgrade requires removal of the engine's top-end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

A. SCREAMIN' EAGLE® HEAVY BREATHER EXTREME AIR CLEANER

We've taken the iconic Screamin' Eagle® Heavy Breather Air Cleaner to the next level—an extreme performance level. Designed for maximum performance, this extra-large Screamin' Eagle Heavy Breather Extreme Air Filter flows 42% more air than a traditional Heavy Breather filter. Air moves smoothly through the filter due to an interior bell-shape feature and then travels through a unique round to oval transitioned tube to improve leg clearance while providing unobstructed air to the throttle body. At speeds over 60 mph, the filter captures air from the front, forcing the air through a smaller area to create a RAM air effect, while the long intake tube enhances torque beyond other Ventilator and Round High-Flow Filters for enhanced acceleration. Designed to feed a large displacement engine enough clean air that can support output of over 150hp. The cast aluminum intake tube and back plate are dressed in rich, gloss black or mirror-like chrome. The back plate features a Screamin' Eagle logo. Kit includes all required mounting hardware. Optional Rain Sock P/N 29400424 is available to protect the exposed element in inclement weather.

Fits '18-later Softail®, '17-later Touring (except models equipped with Fairing Lowers) and '17-later Freewheeler® models. Does not fit models equipped with Fairing Lower Glove Boxes, Fairing Lower Speakers or Road Glide® Fairing Spoilers. All models require ECM calibration with Screamin' Eagle Pro Street Tuner for proper installation. Pending approval for use in California on '21-'22 models. Refer to H-D.com/shop for status.

B. SCREAMIN' EAGLE® HEAVY BREATHER ELITE AIR CLEANER - MILWAUKEE-EIGHT® ENGINE

Take a deep breath. This Screamin' Eagle® Heavy Breather Elite picks up where the past generation Milwaukee-Eight Heavy Breather left off with a 15% air flow improvement. Redesigned to support even more performance with engine builds pushing over 135hp. The iconic Heavy Breather Air Cleaner features a forward-facing oiled cotton filter element that flows large volumes of clean air into the engine. The short, low profile cast tube rams the charge directly into the throttle body with little turbulence for increased power and torque, and the intake tube mounts to a custom back plate that features integral breathers and covers the throttle body electronics for a finished look. The slanted compact filter adds an aggressive performance look, and it is shaped to allow installation on Touring bikes equipped with fairing lowers. This Elite version includes an integrated cover manufactured from forged aluminum and precision machined to further enhance the stylized performance look while exposing a majority of the filter to maximize airflow. Available in your choice of chrome or gloss black finish, the kit includes filter, cover, intake tube, custom back plate, and all mounting hardware.

Fits '18-later Softail® models and '17-later Touring and Trike models. All models require ECM calibration with Screamin' Eagle Pro Street Tuner for proper installation. Does not fit on models equipped with fairing lower glove boxes or fairing lower speakers. Pending approval for use in California on '21-'22 models. Refer to H-D.com/shop for status.

STAGE II

THE BASICS

- Choose a **TORQUE CAM** or **POWER CAM** based on riding style

THE PERFORMANCE

TORQUE KIT
- The rider will feel up to a 15% increase in performance in the low to mid RPM range
- Experience crisp throttle response and acceleration that can be felt at slower speeds, perfect for passing slow moving vehicles without downshifting

TWIN CAM POWERTRAIN

Screamin' Eagle® Stage upgrades offer complete street-compliant performance configurations engineered to generate specific torque and horsepower gains. Eliminating all the guesswork and trial-and-error testing normally associated with engine modifications, Stage upgrades include everything you need to enhance your bike's performance.

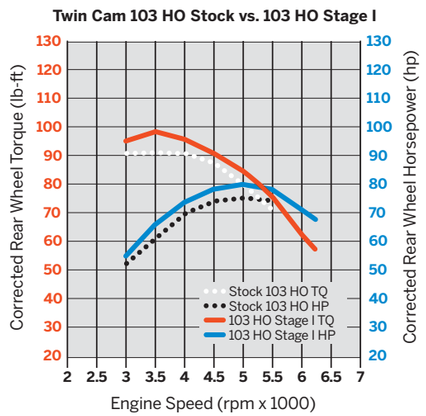

STAGE I

INTAKE + EXHAUST + TUNING

The easiest and most cost-effective step to improve your motorcycle's performance is to increase the airflow into and out of the engine. A high-flow air cleaner and system-matched slip-on muffles provide horsepower and torque improvements you can feel throughout the RPM range, and serve as the core components for all performance upgrades. ECM calibration is required to tune the fuel flow and timing required to accommodate the improved airflow.

Stage I upgrade can be installed without engine disassembly. No special tools are required. Requires ECM tuning.

STAGE II

STAGE I + CAM UPGRADE

Adding performance cams to a Stage I equipped bike is the next step to improved performance. Cam choices allow you to tailor the engine's performance to your specific needs. A torque cam offers on-demand throttle response from low to mid RPM at cruising speed. A power cam targets high-RPM, wide-open throttle response that keeps pulling right up to redline. ECM calibration tuning is required to accommodate the increased valve timing, and performance valve springs may be required for high-lift cams.

Stage II upgrade requires minor engine disassembly to replace the cam. Adjustable pushrods allow cam installation without removing the rocker box. Special tools and ECM tuning are required.

STAGE III

STAGE I + CAMS, BIG BORE CYLINDERS & PISTONS

The next step on the performance journey is to build a bigger engine. An increase in engine displacement allows the engine to swallow more air and fuel, a higher-compression piston squeezes the air/fuel into a more volatile mixture, and when combined, generates more power when ignited. A displacement and compression increase provides torque increases throughout the entire RPM range with a 15-25% improvement in the mid-range power. ECM calibration tuning is required to adjust fuel flow and timing to accommodate the increased displacement.

Stage III bolt-on upgrade requires removal of the engine's top end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

STAGE IV

STAGE I + CAMS, BIG BORE CYLINDERS, PISTONS, CYLINDER HEADS & THROTTLE BODY

To maximize the impact of the increased displacement gained with Stage III updates, the addition of free-flowing ported cylinder heads and a big bore throttle body top off the performance build. Designed to satisfy the high-RPM, throttle-twisting rider, the Stage IV update delivers 20-30% increase in power that keeps pulling right up to the redline, without sacrificing mid-range torque. ECM calibration tuning is required to add more fuel, and a higher-lift cam may be required to deliver maximum power.

Stage IV bolt-on upgrade requires removal of the engine's top end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

TWIN CAM STAGE II UPGRADE

Camshafts are a fundamental ingredient in the performance recipe, because they control the timing and duration of all major engine events. They are the primary means by which you can tune your engine's horsepower and torque output. Every cam has unique lift and overlap performance characteristics, which means you need to select cams based on exactly the kind of power you're looking for.

A. SCREAMIN EAGLE® TWIN CAM PERFORMANCE CAMS

Kits include front and rear cams. Splined rear cam is included for exceptional load handling capability. Gaskets and bearings not included. Cam Installation Kit P/N 17045-99C (sold separately) includes all required gaskets, bearings and seals for proper installation. Dealer installation is recommended and special tools are required for proper installation.

SE-255 CAM KIT

The ultimate in torque cams, this cam offers substantial increase in low end torque for engines up to 110 cubic inches with compression ratios up to 10 to 1. The low end torque increases are great for heavy bikes or for the person who routinely shifts below 4500 RPM and wants the power available to pass without downshifting. The cam still makes peak power above 5000 RPM so people with lighter bikes will enjoy the torque increases without feeling like the bike runs out of air at higher engine speeds. 50-State U.S. EPA compliant.

25638-07

For use on '09-'13 Dyna®, Softail®, and '09-'13 Touring and Trike models with 103CI and 110CI engines. All models require ECM calibration for proper installation. Labor cost not included. See Dealer for details.

SE-259E CAM KIT

Developed specifically for big displacement Twin Cam engines, this cam has a modern lobe design that allows for higher valve lifts for a given duration. A high-lift version of the SE-211 camshaft, this cam works great with 103-cubic-inch and larger engines with free-flowing intake and exhaust. It can be used with stock heads (updated with race springs) and high-compression pistons for even more torque than a SE-211 cam or can be coupled with any of the performance heads to realize the full power potential. 50-State U.S. EPA compliant.

25482-10

For use on '11-'15 103CI and 110CI Touring and Trike models. Installation requires separate purchase of Performance Valve Spring Kit P/N 18013-03A. All models require ECM calibration for proper installation. Labor cost not included. See Dealer for details.

SE-585 CAM KIT

This cam is a great match for riders of heavy Touring bikes looking for big torque at the low end. Just a quick downshift to fourth gear results in an effortless pass of that slow-moving tractor-trailer ahead of you. This cam provides an early hit of torque at the low end of the RPM spectrum. A unique combination of lift, cam lobe duration and an enhanced cam profile ramp provides a performance boost you can feel. The cam's QRD (Quiet Ramp Design) delivers high torque throughout the RPM range while reducing valve train noise. 50-State U.S. EPA compliant.

25400117

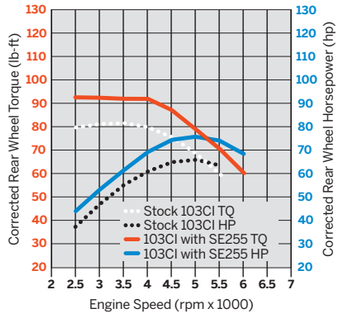

For use on '14-'16 Touring models with the use of a 58mm Throttle Body. Also fits '14-'16 CVO™ Touring models with or without the use of a 58mm Throttle Body. Does not fit Trike models. Installation requires separate purchase of Performance Valve Spring Kit P/N 18013-03A. All models require ECM calibration for proper installation. Labor cost not included. See Dealer for details.

NOTE: Separate purchase of Cam Drive Retention Kit P/N 25566-06 and Cam Spacer Kit P/N 25928-06 may be required. These kits contain five different spacers to achieve proper sprocket alignment. Individual spacers can be purchased separately.

A. SCREAMIN' EAGLE® BILLET CAM SUPPORT PLATE WITH HIGH-VOLUME OIL PUMP

A great upgrade for any performance motor. The Billet Cam Support Plate is manufactured from billet aluminum with pressed-in bronze bushings and is pre-assembled with the crankshaft bushing and oil pressure relief valve. Aluminum is specified at 6061 billet plate, heat-treated to T6 specifications with a surface-hardened anodized finish to provide superior strength, rigidity and durability. CNC-precision machining ensures precise dimensions and constant material thickness across the plate, enabling perfect alignment of cams and chains. Cam bushings are made from 660 bronze materials to provide enhanced wear resistance and to stand up to increased loads from the high lift cams common in large displacement motors. The improved Screamin' Eagle® high-flow oil pump provides higher pressure when the oil is hot to keep pressure drops to a minimum and increases the oil supply by 16% and the scavenging by 29% over the '06-'17 Original Equipment oil pump.

25282-11
Fits '06-'17 Dyna® and '07-'17 Softail®, and '07-'16 Touring and Trike models. Installation requires separate purchase of Cam Service Kit P/N 17045-99D and Drive Gear Retention Kit P/N 25566-06.

B. SCREAMIN' EAGLE HYDRAULIC CAM CHAIN TENSIONER AND HIGH-FLOW OIL PUMP UPGRADE KIT

This kit updates the cam chain tensioner of your Twin Cam 88® engine to the latest design, as featured on the Twin Cam 96™ engine. The billet cam support plate has been designed to allow the installation of the Twin Cam 96 hydraulic cam chain tensioner to Twin Cam 88-equipped models. These Hydraulic Cam Chain Tensioners will significantly outlast the spring-loaded tensioners and are an ideal addition to an engine modified for improved performance. In addition, '02-'06 models utilize a Twin Cam 96 single row front roller chain and sprocket (included in kit). '99-'01 models use Original Equipment front silent chain and sprocket to retain the cam position sensor function. The kit includes an improved Screamin' Eagle High-Flow Oil Pump that provides increased oil pressure at high-operating temperatures. This kit increases the oil supply by 23% and scavenging by 50% when compared to the '99-'05 Original Equipment oil pump and reduces operating temperature of bearings to improve bearing life.

25284-11
Fits '99-'05 Dyna, '00-'06 Softail and '99-'06 Touring models. Installation requires separate purchase of Spacer Kit P/N 25285-08, Cam Service Kit P/N 17045-99D and Drive Gear Retention Kit P/N 25566-06.

STAGE III & IV UPGRADES

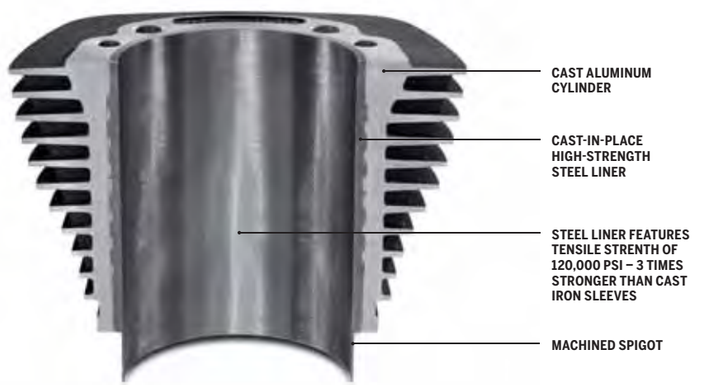

Screamin' Eagle® Stage Kits offer complete street-compliant performance configurations engineered to help you generate specific torque and horsepower gains. Eliminating all the guesswork and trial-and-error testing normally associated with engine modifications, Stage Kits include everything you need to enhance your bike's performance, including big-bore cylinders, high-compression pistons, performance cams and high-flow air cleaners.

FEATURES

BOLT-ON BIG BORE CYLINDERS

In the past, the only way to increase the bore of your 103- or 110-cubic-inch Twin Cam V-Twin motor was to tear down the motor and re-bore the engine cases to fit larger bore cylinder spigots. It was a labor-intensive and expensive process. The Screamin' Eagle team has engineered a 4" Big Bore Cylinder and Piston package that increase the internal bore from 3-7/8" to 4", without increasing the outside diameter of the cylinder spigot. The cylinder slips into the existing case bore without modification.

SPORTSTER® POWERTRAIN

Screamin' Eagle® Stage upgrades offer complete street-compliant performance configurations engineered to generate specific torque and horsepower gains. Eliminating all the guesswork and trial-and-error testing normally associated with engine modifications, Stage upgrades include everything you need to enhance your bike's performance.

STAGE I

INTAKE + EXHAUST + TUNING

The easiest and most cost-effective step to improve your motorcycle's performance is to increase the airflow into and out of the engine. A high-flow air cleaner and system-matched slip-on mufflers provide horsepower and torque improvements you can feel throughout the RPM range, and serve as the core components for all performance upgrades. ECM calibration is required to tune the fuel flow and timing required to accommodate the improved airflow.

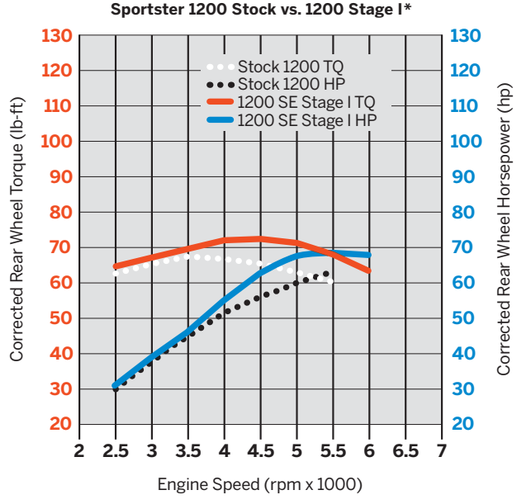

Stage I upgrade can be installed without engine disassembly. No special tools are required. Requires ECM tuning.

Street legal and/or street compliant statements refer to product meeting 50-State emissions and noise standards in the United States.

STAGE II

STAGE I + CAM UPGRADE

Adding performance cams to a Stage I equipped bike is the next step to improved performance. Cam choices allow you to tailor the engine's performance to your specific needs. A torque cam offers on-demand throttle response from low to mid RPM at cruising speed. A power cam targets high-RPM, wide-open throttle response that keeps pulling right up to redline. ECM calibration tuning is required to accommodate the increased valve timing, and performance valve springs may be required for high-lift cams.

Sportster 1200 Stock vs. 1200 Stage II*

*** 14-later XL1200 Stage II with Heavy Breather A/C & Street Cannon Mufflers**

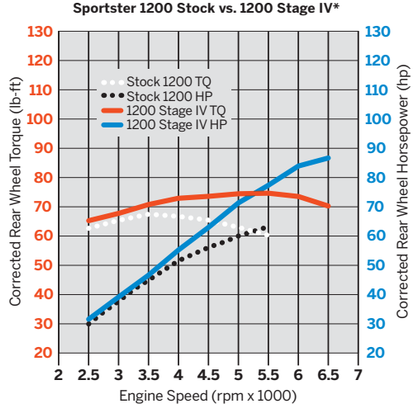

Stage II upgrade requires minor engine disassembly to replace the cam. Special tools and ECM tuning are required.

STAGE IV

STAGE I + CAMS, PISTONS, CYLINDER HEADS & THROTTLE BODY

For maximum performance improvement, the addition of high-compression pistons, free-flowing ported cylinder heads and a big bore throttle body top off a performance build. The large-diameter throttle body and port-matched intake manifold deliver huge volumes of fuel and air to the engine, the smooth passages and larger valves easily dump the mixture into the engine and the high compression pistons squeeze the air/fuel into a more volatile vapor. When ignited, the result is a major power increase. Designed to satisfy the high-RPM, throttle-twisting rider, the Stage IV update delivers 20-30% increase in power that keeps pulling right up to the redline, without sacrificing mid-range torque. ECM calibration tuning is required to add more fuel, and a higher-lift cam may be required to deliver maximum power.

Sportster 1200 Stock vs. 1200 Stage IV*

*** 1200 Stage IV with High-Flow A/C & Street Cannon Mufflers**

Stage IV bolt-on upgrade requires removal of the engine's top end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

E. SCREAMIN' EAGLE BIG TWIN COMPENSATOR

F. SCREAMIN' EAGLE VARIABLE PRESSURE CLUTCH
Get more performance from the Original Equipment clutch. The Screamin' Eagle® Variable Pressure Clutch is designed to help put the added power from a Screamin' Eagle Stage Kit to the pavement. This bolt-on kit harnesses the centrifugal force of spinning weights to increase the clutch capacity as engine speed increases. The mechanism applies increasing pressure to the stock clutch pressure plate as RPM rises. The result: high torque-handling capabilities without increasing clutch lever effort at idle. The Variable Pressure Clutch also provides smoother clutch disengagement at lower speed. Kit fits behind most stock derby covers with no modifications. See installation manual for additional accessory derby cover fitment information.

To match the performance demands of your engine, team the Variable Pressure Clutch with your choice of clutch diaphragm springs. We recommend the higher-capacity Screamin' Eagle Diaphragm Spring P/N 37951-98 for major performance upgrades.

A. SCREAMIN' EAGLE® TWIN CAM PERFORMANCE ASSIST AND SLIP (A&S) CLUTCH KIT

Developed for the high-thrust 110CI engine featured as Original Equipment on '14-later CVO™ models, this A&S clutch provides significantly increased torque-handling capacity (135lb/ft). Clutch is designed to improve engagement grip and provides minor slippage during downshifting to reduce shock to the power train. Reduces hand lever pull effort by over 1 pound. Complete kit features improved clutch plates for enhanced wear resistance and is the perfect addition when installing a high-output Screamin' Eagle® Stage Kit.

37000026
Fits '14-'16 Touring and Trike models with hydraulic clutch actuator. Original Equipment on FXDLS, FLSS, FLSTBS and FXSE models.

B. SCREAMIN' EAGLE PERFORMANCE CLUTCH FRICTION DISC KIT

Newly developed friction material delivers longer life than Original Equipment friction discs. Kit includes new precision-machined flat steel plates. This Friction Disc Kit is a perfect match for the Screamin' Eagle Twin Cam Performance Race Clutch Hub Kit P/N 37976-08.

37980-10
Fits '99-'17 Twin Cam-equipped models and '98-'99 Evolution® 1340-equipped models. D. SCREAMIN' EAGLE PERFORMANCE CLUTCH KIT

Performance Clutch Kit converts the 8-plate clutch to a 9-plate design. The surface area is increased by 13% and the spring rate is increased by 10% for a combination that can handle over 115 ft-lbs of torque at the crank, a 23% increase over the stock-rated capacity. Kit includes Kevlar® fiber-based friction discs and performance clutch spring.

38002-04
Fits '91-later XL and '94-'97 Evolution 1340-equipped models.

E. SCREAMIN' EAGLE PERFORMANCE SLIPPER CLUTCH FOR VRSC™ MODELS

This clutch offers reduced lever effort and improved performance. The unique "slip and assist" ramp system opens the two halves of the clutch hub slightly during high loads to the drivetrain, allowing a moderate slip that reduces shock to the drivetrain during rapid downshifting. The resulting reduction in wheel hop allows maximum contact between the tire and the road in wet or slippery conditions. Clutch lever effort is also reduced by 20% in 1130cc and 30% on 1250cc applications.

37938-08KA
Fits '02-'07 VRSC™ models.

SHORT & LONGBLOCK PROGRAM

When it comes time to repower your motorcycle, the first stop should be your local Harley® Dealer. They can set you up with a replacement short-block or longblock engine that is manufactured from 100% new Original Equipment parts and subjected to the same rigorous testing as all Harley engines. Plus, all longblock engines feature a one-year factory warranty and your original VIN stamped on the case.

F. SHORTBLOCK ASSEMBLY

The perfect starting point for building the engine of your dreams. Engine shortblocks are manufactured and assembled on Harley-Davidson's main engine assembly line for exceptional quality and reliability. Shortblock cases, flywheels, bearings and rods are preassembled and ready for your custom build. Kit includes current spec Original Equipment cam plate, oil pump, cam drive components and the gaskets, seals and most of the hardware required to complete the engine and install it (not all components shown). You select your cylinders, heads, cams, covers and other top-end components. Choose one of the Screamin' Eagle® Stage kits to incorporate reliable performance and pick from our decorative engine covers to customize the look. Shortblock Assemblies are stamped with a new VIN and include MSO (Manufacturers Statement of Origin). The MSO is for Domestic only. Kits ship directly from the factory within 3-5 days. Assembly comes stamped with a new VIN on Twin-Cam Kits. (For VIN matching shortblock assemblies see the appropriate Service Parts Catalog.)

HARLEY-DAVIDSON® LONGBLOCK PROGRAM

Your engine is the heart and soul of your Harley-Davidson® motorcycle. When the miles start to add up, a Harley-Davidson® LongBlock can put the rumble back in your ride simply, quickly and affordably.

WHY SHOULD I CONSIDER A LONGBLOCK? Unlike an engine rebuild from the repair shop down the street, the Harley-Davidson® LongBlock is manufactured from 100% new Original Equipment components, and is built to the latest factory specifications. Engine includes upgraded Screamin' Eagle® lefty crankcase bearing, Screamin' Eagle cam bearings and Screamin' Eagle performance tappets to handle higher-stress loads and performance upgrades. In addition, '99-'06 LongBlocks are upgraded with late-model hydraulic cam tensioners, high-volume oil pump and billet cam plate. '07-'16 103CI and 110CI engines feature factory-installed Automatic Compression Releases.

WHAT DOES THE H-D® LONGBLOCK INCLUDE? The crankcase is pre-assembled with flywheels, connecting rods, bearings, seals, cylinders, pistons, rings, heads, valves, valve springs, tappets and pushrod covers. Also included and ready for Dealer installation are top end rocker arm supports, rocker arms and shafts, pushrods and breathers. The LongBlock also includes cam support plate, cam plate bearings, cam and timing chain drive, hydraulic tensioners and all required gaskets and new hardware.

ARE UPGRADES AVAILABLE?* You can choose silver or black-highlighted engines to match your styling direction. Bikes originally equipped with Twin Cam 88® engines can upgrade to 95 or 103CI displacement, and Twin Cam 96™-equipped models can be repowered with 103 or 110CI engines, based on specific model fitment. Upgrades require model-specific ECM recalibration (sold separately). Only available in North America.

WHAT ELSE DO I NEED? LongBlock is sold without cam shafts, lower rocker boxes, upper rocker box covers or cam cover. You have the option to reinstall your current cams and covers, or select from a wide assortment of performance and custom engine cover options.

FAST AND EASY: Just take your Harley® motorcycle to your authorized dealership. They will remove the engine from the frame, ship the left crankcase half to Harley-Davidson and in a short time, you will have a new LongBlock back, ready for the dealer to reinstall in your bike. Your engine retains its original vehicle identification number (VIN) for easy title exchange and registration.

**Displacement upgrades are available for vehicles previously equipped with street compliant big bore kits only.*

A. BRASS COLLECTION

The authentic alternative to the typical chrome-covered or blacked-out look, the Harley-Davidson® Brass Collection delivers a warm, handcrafted look to your custom ride. These minimalistic living finish components make a garage-built styling statement and are the ideal addition to your stripped-down bobber or café motorcycle. Artistically manufactured from solid brass, these components feature a natural antique finish that will age and patina when exposed to the elements. Unlike bright polished and plated brass trim, these heritage-finished components are subtle additions to your ride and don't compete for attention with the rest of the bike. Brass Collection components are factory treated with wax to slow the aging process, and are shipped with cleaning and care instructions.

BRASS COLLECTION
The authentic alternative to the typical chrome-covered or blacked-out look, the Harley-Davidson® Brass Collection delivers a warm, handcrafted look to your custom ride. These minimalistic living finish components make a garage-built styling statement and are the ideal addition to your stripped-down bobber or café motorcycle. Artistically manufactured from solid brass, these components feature a natural antique finish that will age and patina when exposed to the elements. Unlike bright polished and plated brass trim, these heritage-finished components are subtle additions to your ride and don't compete for attention with the rest of the bike. Brass Collection components are factory treated with wax to slow the aging process, and are shipped with cleaning and care instructions.

HEATED HAND GRIPS
Keep comfortable on those cool mornings or frigid night rides. Warm hands have a major impact on overall body comfort and sometimes gloves just aren't enough. These thermostatically controlled grips feature variable heat settings controlled with a military-grade resistor and use automatic temperature monitoring to adjust to ambient temperatures. With both hands on the grips, they will remain at a constant temperature regardless of changes in outside temperature. The self-contained control circuit and control knob means you have no additional switches or controller boxes to mount and the grips are switched on/off with the ignition to avoid draining your battery. The glueless grip design allows grip removal if you change handlebars or motorcycles.

The single-stalk mount permits a wide range of adjustability and the convex mirror face maximizes the field of view. COMFORT, STYLE OR BOTH?

Every person is unique. Your overall height, arm reach, upper body length and riding style all dictate your relationship to the bike's controls. Add in the desire for a unique, custom look and your handlebar options multiply exponentially.*

REACH™ HANDLEBARS
Recommended for shorter riders, Reach™ Handlebars are shaped to position the hand controls closer to the rider for optimized elbow and wrist position.

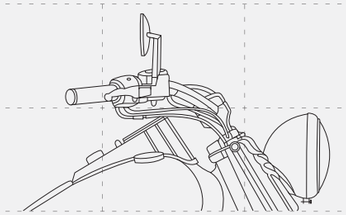

TALLBOY™ HANDLEBARS
Recommended for taller riders, Tallboy™ handlebars enable long-armed riders to more comfortably fit and maneuver the motorcycle.

YOUR RIDING POSITION

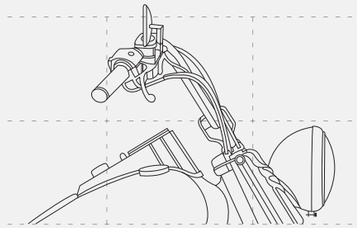

DRAG HANDLEBAR*

Narrow, flat and more aggressive, drag bars provide a straight elbow and neutral hand and wrist position. For maximum comfort, drag bars can be positioned with curved or straight risers to minimize stretch to the controls.

BEACH HANDLEBAR*

Low and wide, a beach bar spreads your arms and gives you room to breathe. Ideal for the rider with long arms, beach bars can be a little too wide for many riders. While selecting a bar, make sure you can reach the hand controls when the handlebar is fully turned.

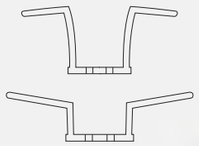

APE & TALLBOY HANDLEBAR*

Tall and wide, ape and Tallboy™ handlebars provide a classic "fists-in-the-wind" look and can add long-haul comfort for riders with long arms. Because handlebar height is regulated in many areas, check local laws before installing a tall handlebar.

CHIZELED HANDLEBAR*

For cutting edge style, a Chizeled Bar combines the hands-up feel of a mini-ape with the narrow width of a drag bar. The bar's shoulder-width design keeps the elbows in and the arms straight ahead, and the wrist and hands fall in a neutral palms-down grip.

CHOOSING YOUR HANDLEBAR

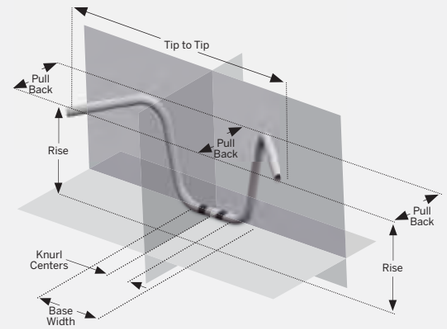

RISE is the vertical distance between a handlebar's tip and its base. Adding risers to bars that sit too low can help put hand grips into your sweet spot.

PULL BACK is the distance the handlebar tips come back toward the rider. Greater pull back can eliminate the long reach to the bar for a shorter rider.

WIDTH is measured from tip to tip. Make sure the bar isn't too wide so it pulls your hands off the grips when turning.

KNURL CENTER is the distance between the center line of the bar's knurling. The measurement should match the riser dimension to maximize clamping pressure.

*NOTE: Installation of some handlebars and risers may require a change in clutch and/or throttle cable and brake lines for some models. Handlebar height is regulated in many locations. Check local laws to ensure your motorcycle meets applicable regulations.
**1.25" Fat Bar base necks down to fit 1.0" handlebar clamp.

A. EXTREME REACH™ HANDLEBAR*
Extensively tested with a panel of riders between 5'-0" to 5'-5" tall, this Extreme Reach™ Handlebar and recommended riser combination was proven to be the most ergonomically pleasing handlebar for many Dyna® and Softail® models. Shaped to provide the ideal balance of pull back and width, this handlebar produces an overall pull back of 11.0" and a tip-to-tip width of 30.0" when combined with Curved Riser Kit P/N 56266-09 (sold separately). Your hands fall naturally in place and the narrow width reduces your stretch while making low-speed turns and parking lot maneuvers.

55800563
Fits '06-'17 Dyna (except '14-'17 FXDL) and '00-'17 Softail models (except FLSS, FLSTFBS, FXCW, FXCWC, FXS, FXSB, FXSTD and Springer™). Does not fit CVO™ models. All models require separate purchase of additional installation components.

See your Dealer for cables, lines and additional installation components required, or visit www.H-D.com/store and search part number 55800563.

B. REACH HANDLEBAR* – 1.0"
Recommended for riders between 5'-2" and 5'-8" tall, this Reach Handlebar is shaped to position the hand controls closer to the rider for optimized elbow and wrist position. Designed to provide the ideal balance of pull back and width, this handlebar allows your hands fall naturally in place. The narrower width reduces your stretch while making low-speed turns and parking lot maneuvers, and the overall effect is improved confidence and long-range comfort for short-armed riders.

Fits '18-later FLDE, FLHC, FLHCS, FLSL, FXBB, FXLR, FXST and '21-later FXBBS models. All models require separate purchase of additional installation components.

CHOOSE YOUR BATWING HANDLEBAR
Just about every model of Harley-Davidson® motorcycle features a different stock handlebar. Selected to complement the style or use of the bike, the handlebar may be the ideal shape for many riders, but of course, not everyone has the same physical characteristics.

Choosing a bar for your batwing fairing-equipped model is about more than just style – it's about how you approach the road. Where the bar positions your hands, wrists and arms directly affects how you feel on your motorcycle. For every set of bars, there are three factors at work: rise, pull back and width. These three measurements determine your reach to the hand controls and, therefore, your overall feeling of comfort and control.

A. ELECTRA GLIDE® CHROME HANDLEBAR*
Replace your stock polished bar with this 1.0", chrome handlebar that allows you to tuck the wires inside the bar for a clean, finished look. Identical shape to the Original Equipment Electra Glide and Street Glide® bar, this high-quality chrome-plated handlebar is designed to be compatible for use with TGS-equipped Electra Glide® models.

HANDLEBAR RISERS

You may think you are perfectly happy with the way your bike is adjusted. But that doesn't mean that it is correctly set up for you. We get used to our bikes — our muscles become trained and we end up accommodating the bike. It is far better to take the time to make the bike accommodate you. If you are satisfied with your handlebar's width and wrist position, but wish it was just a little higher, lower or closer to you, your dealer can recommend a set of handlebar risers that move the bar into your comfort zone.

ADJUSTING YOUR HAND POSITION

STOCK HANDLEBAR

Just about every model of Harley-Davidson® motorcycle comes with a different stock handlebar. Selected to complement the style of the bike, the handlebar may be the ideal shape for many riders, but of course, not everyone has the same physical characteristics.

STOCK HANDLEBAR WITH RISERS

If the stock handlebar has the correct width and hand position for you, but seems just a little too far away, we offer riser kits that bring the controls within reach. Straight and curved risers are available for many model and handlebar combinations.

Stage I/II Features:

R-Tune
Equalization is specific to the motorcycle environment, designed from the ground up to be stronger and louder, to overcome road rumble and wind noise. Left and right speakers are designed to project sound directly at the rider for an enhanced audio experience.

BME (Bass Management Enhancement)
Designed to produce more bass, no matter the volume. The active amplifier DSP continually adapts to speed and road noise and maximizes the speakers' bass output to create powerful bass at any volume or speed.

IDHS™ (Inductive Damping Heat Sink)
The speaker fins push heat away from the voice coils to reduce speaker temperature and distortion to produce the clearest-possible audio.

ICC+
The Integrated Concealed Crossover boasts a hyper-efficient design and produces the clarity and output usually only found in traditional component speaker set-ups, plus the design allows for a quicker install.

The Harley-Davidson® powered by Rockford Fosgate® App
Install and fine-tune the system yourself. Smart-Install makes initial installation and upgrades incredibly fast and easy. The Harley-Davidson® powered by Rockford Fosgate® App even adapts for each new speaker added to the audio system and tailors the audio experience automatically.

M-DEQ™ (Motorcycle Dynamic EQ)
Our smart amplifier adaptively changes the EQ points in real time, meaning the tune changes to ensure incredible sound quality no matter the motorcycle speed or riding conditions.

Full Range Class-D Technology
More power and less electrical fatigue. These high-efficiency amplifiers produce class leading power and don't over-draw on the motorcycle electrical system.

Bridge Mounted Design
The offset speaker design eliminates acoustic reflection and maximizes audio output. The specific left and right Tweeters are aligned to the motorcycle rider's position -- sound is always directed for an optimal on-road audio experience.

Powerful, intelligent amplifier technology engineered to perform in the demanding motorcycle environment. This new, compact amplifier is easy to install in the motorcycle saddlebag. R-Tune: Equalization is specific to the motorcycle environment, designed from the ground up to be stronger and louder, to overcome road rumble and wind noise. Left and right speakers are designed to project sound directly at the rider for an enhanced audio experience. M-DEQ™ (Motorcycle Dynamic EQ): Our smart amplifier adaptively changes the EQ points in real time, meaning the tune changes to ensure incredible sound quality no matter the motorcycle speed or riding conditions. BME (Bass Management Enhancement): Designed to produce more bass, no matter the volume. The active amplifier DSP continually adapts to speed and road noise and maximizes the speakers' bass output to create powerful bass at any volume or speed. Computer Controlled Digital Signal Processing: Smart control, agile configurations. This intelligent amplifier continuously adapts to your speaker set-up. When you step up to the next audio stage or add additional speakers, the amplifier adjusts signal and output and is ready to deliver the sound quality and SPL you demand. Full Range Class-D Technology: More power and less electrical fatigue. These high-efficiency amplifiers produce class leading power and don't over-draw on the motorcycle electrical system. Ridiculously Rugged: Built stronger and ready to go anywhere. This amplifier was designed and tested over 80 hours to perform in the harshest conditions, no matter the heat or environment. So, anywhere you and your bike can go, our amplifiers can too. Rated Power: 50 watts per channel x 4 @ 4ohms; 100 watts per channel x 4 @ 2ohms Dimensions: 8.13" x 5.39" x 2.01"

SELECT YOUR SYSTEM BOOM!™ AUDIO SYSTEMS— STAGE I OR STAGE II

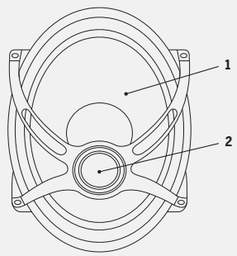

Your bike's factory-equipped Boom!™ Box in-dash audio system and speakers are designed to provide enjoyable full-range sound quality, at a volume level you can hear on the open road. With the addition of Boom! Audio speakers and amplifiers you'll get louder, ride-enhancing sound — thanks to increased frequency response, lower distortion and strong mid-range performance that cut through wind noise. Designed specifically for your ride, Boom! Audio equipment doesn't just sound great — it's engineered tough to withstand the harsh outdoor environment.

STAGE I

FOR QUALITY SOUND AND DEEP BASS

6.5" ROUND SPEAKER (BATWING® FAIRING SPEAKER SHOWN)

5" x 7" SADDLEBAG SPEAKER

1 WOOFER 2 TWEETER

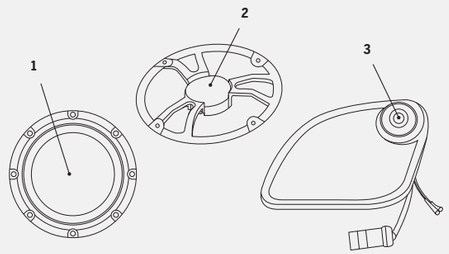

Boom! Audio Stage I systems achieve clear highs and deep bass for great sound quality.

Single amplified, two-way 100-watt per channel speakers feature:

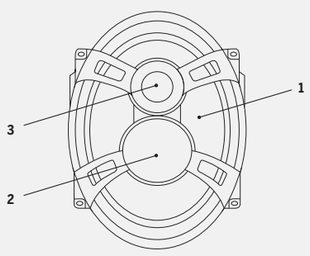

- A woofer and tweeter that deliver great-sounding low and high frequencies
- One 75-watt amplifier channel that powers each speaker

STAGE II

FOR THE PUREST SOUND EXPERIENCE

6.5" ROUND SPEAKER (ROAD GLIDE® FAIRING SPEAKER SHOWN)

5" x 7" SADDLEBAG SPEAKER

1 WOOFER 2 MID-FREQUENCY DRIVER 3 TWEETER

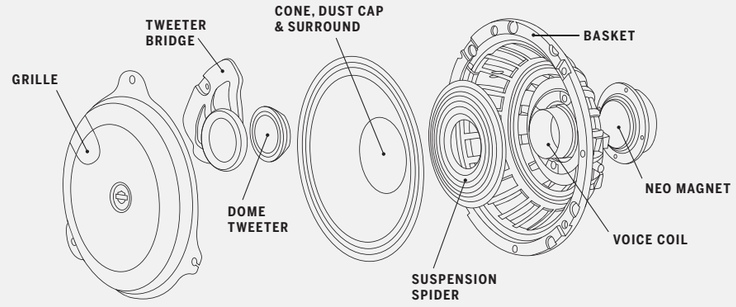

Boom! Audio Stage II systems achieve the highest quality and purest sound experience on the market with the deepest bass and clearest mids and highs.

Bi-amplified, three-way 150-watt per channel speakers feature:

- A woofer, a midrange and a tweeter that deliver low, mid and high frequencies through the best driver design
- Two 75-watt amplifier channels that power each speaker – one powers the woofer and one powers the midrange/tweeter combo

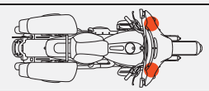

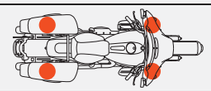

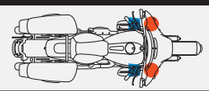

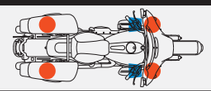

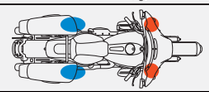

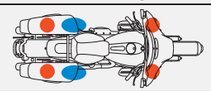

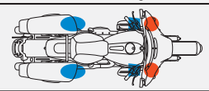

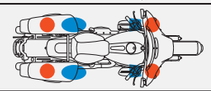

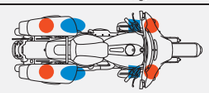

STAGE I BOOM!™ AUDIO SYSTEMS

Boom!™ Audio Stage I systems take your sound to the next level. When compared to the factory-installed Original Equipment audio system, Boom! Audio Stage I speakers feature larger woofers for deeper bass and soft-dome tweeters for better balanced sound quality. Efficient Stage I speakers can be easily powered with the built-in amplifier in the factory-installed Boom Box Infotainment System, or with the addition of Boom!™ Audio amplifiers, the larger speakers can produce more volume at all frequencies. A custom EQ was developed for each configuration of speakers to get the most out of the Stage I system.

STAGE I BOOM!™ AUDIO – CUTS THROUGH ROAD NOISE TO DELIVER EVERY NOTE

THE FIRST STEP – Add amplifier(s) and upgrade the factory speakers

Boom!™ Audio – Stage I

A. BOOM!™ AUDIO AMPLIFIER KIT

Take your music to the streets. Boom!™ Audio Amplifier Kits allow you to crank up the volume without distortion. The amplifier provides more power than Original Equipment radio alone, resulting in increased volume, fuller sound reproduction and reduced clipping. Unlike aftermarket amplifiers that connect between the radio and the speakers, the Boom! Audio amplifier bypasses the radio's internal power amp to produce the cleanest sound possible. The Boom! Audio Amplifier boosts the pure source signal, minimizing any distortion generated through the speaker output. The system-matched high-output signal features optimized sound equalization for crisp, clear vocals and maximum bass response and the strong midrange response cuts through wind and road noise. The marine grade, Class D, 4-channel, 75-watt RMS/channel amplifier (300-watt RMS total) has been designed from the ground-up for the harsh motorcycle environment. Fairing Mounted kit includes all mounting hardware and wiring harness. Note: The use of the Boom! Audio Amplifier turns off the radio's internal amplifier.

STAGE II BOOM!™ AUDIO SYSTEMS

Boom!™ Audio Stage II systems give you the very best motorcycle sound experience. Stage II systems are based on a bi-amplified, three-way speaker design. Each Stage II speaker features a separate woofer, midrange and tweeter element that allow frequencies to be delivered with the optimum driver design. Each speaker is powered by two channels from the amplifier — one for the woofer, and the second for the midrange/tweeter combination — for a total output of 150 watts/speaker. This doubling of the power allows you to play your music louder with far less distortion than traditional systems.

BOOM!™ AUDIO STAGE II COMPONENTS*
Headline your own concert tour. Big and bold is the best way to describe the musical performance you will experience when listening to your favorite band through a Boom!™ Audio Stage II sound system. The weather-proof bi-amplified, three-way, 150-watt per channel speakers feature high-excursion woofers and separate mid- and high-frequency drivers. An industry-leading driver design utilizing premium materials to deliver increased accuracy, durability, and responsiveness. Powered by a dedicated 300-watt RMS amplifier, each pair of speakers is capable of producing "filling-rattling" volume. Designed to work seamlessly with the factory installed Boom! Audio infotainment head unit, the Boom! Stage II components are system matched and feature custom-tuned static and dynamic equalization that dial in the ideal setup for your ride. And you can choose how far you want to go. From a single pair of fairing-mounted speakers and a 300-watt amp to a full bore 8-speaker, 4-amp, 1200-watt system, we've got you covered.

A. BOOM! AUDIO AMPLIFIER KIT
Take your music to the streets. Boom! Audio Amplifier Kits allow you to crank up the volume with significantly less distortion. The amplifier provides more power than Original Equipment radio alone, resulting in increased volume, fuller sound reproduction and reduced clipping. Unlike aftermarket amplifiers that connect between the radio and the speakers, the Boom! Audio amplifier bypasses the radio's internal power amp to produce the cleanest sound possible. The Boom! Audio Amplifier boosts the pure source signal, minimizing any distortion generated through the speaker output. The system-matched high-output signal features optimized sound equalization for crisp, clear vocals and maximum bass response and the strong midrange response cuts through wind and road noise. The marine-grade, Class D, 4-channel, 75-watts RMS/channel amplifier (300-watt RMS total) has been designed from the ground-up for the harsh motorcycle environment. Fairing-Mounted kit includes all mounting hardware and wiring harness. Note: The use of the Boom! Audio Amplifier turns off the radio's internal amplifier.

Lightweight, durable neck bow wraps around the ear and across the back of the neck and fits comfortably below the shell of most half helmets. The adjustable boom microphone with wind sock has been optimized for superior clarity when connected to Harley-Davidson intercom and Bike-to-Bike communications equipment and the quick-disconnect plug allows you to step away from the motorcycle without removing the headset. A clothing clip (not shown) is included for added comfort and reduced ear fatigue. The coiled cord permits freedom of movement in the saddle. The 7-pin DIN plug can be connected to the front and rear communications ports, allowing both rider and passenger access to the music, navigation and voice communications features of the motorcycle.

76572-09	7-pin DIN Connector. Fits '98-later FLHTCU, FLHTCUSE, FLHTK, FLHTKSE, FLTRK, FLTRU, FLTRUSE and FLHTCUTG models. Also fits with vehicles equipped with Communication Switch Kit P/N 77173-08 or Boom! Audio Music and Intercom Kits.

The 7-pin DIN plug can be connected to the front and rear communications ports, allowing both rider and passenger access to the music, navigation and voice communications features of your motorcycle and the microphone has been optimized for superior clarity when connected to Harley-Davidson intercom and Bike-to-Bike communications equipment.

See and be seen. With Harley-Davidson Genuine Motor Parts and Accessories headlamps, brake lights and auxiliary lighting, you get improved visibility in front of you and more attention from all around you.

A. SPECTRA GLO™ LED LIGHTING CONTROLLER KIT*
Nothing draws attention at the curb like a well-lighted bike. Whether you are looking for a rich neon glow or a pulsing crowd pleaser, the Harley-Davidson® Spectra Glo™ Lighting System brings ultra-bright LED lighting to your ride. The Spectra Glo System utilizes RGB LED technology to produce over 500 shades of brilliant color, all controllable with a water-proof handheld wireless fob. Simply use one button to select one of the 7 base colors, and then dial in the shade you desire. You can choose to match the color of your bike, or add a contrasting tone from the wide spectrum of colors. Once you select a color, you can choose between solid, flash or fade modes with a tap of the remote control.

At the core of the Spectra Glo system is the Lighting Controller. The compact waterproof controller box is hidden beneath the seat, and is activated with the included wireless remote fob. The Lighting Controller is the hub for all the added Spectra Glo light options, and syncs the color and mode selection between all the LEDs. Designed specifically for Harley-Davidson motorcycles, the controller will not interfere with the bike's electronics. The low draw LED lamps have a one-hour auto-shutoff feature to preserve the battery. Kit includes Controller, Remote Control Fob with battery and plug-in wiring harness.

A. ELECTRA GLO™ ILLUMINATED FAIRING ACCENT TRIM
Sweeping trim dresses the Electra Glide® Batwing Fairing for a distinctive, yet functional look. Trim may cover pinstripes or two-tone paint lines on some vehicles. Check appearance prior to installation.

Fits '14-later Electra Glide®, Street Glide®, Ultra Limited, and Tri Glide® models. Fitment on vehicles with two-tone paint, pinstriped, or CVO™ models is not recommended due to the potential for the accent lights to overlap pinstripes or paint lines.

COLOR-MATCHED SLIPSTREAM VENT TRIM AND ROAD GLIDE® HEADLAMP TRIM COVERS

COLOR-MATCHED SPLITSTREAM VENT TRIM – BATWING FAIRING
The batwing fairing is a key visual and functional element of your Touring bike, and the Splitstream vent sits front and center for all to see. Shaped to replace the Original Equipment satin black soft trim, this one-piece rigid component blends into the sweep of the outer fairing and dresses the vent in style. Available in your choice of finishes, this vent trim is the perfect complement to available windshield trim kits.

Fits '14-later Electra Glide®, Street Glide®, Ultra Limited and Tri Glide® models with batwing fairing.

*NOTE: This product is a Paint to Order accessory. Please allow for an average of 5 weeks' delivery for this item.

COLOR-MATCHED ROAD GLIDE® HEADLAMP TRIM
This sleek one-piece headlamp surround adds a clean custom look to the nose of the Road Glide® model. The easy-to-install Headlamp Trim hugs the dual headlamps and covers the matte black factory bezel for a menacing aerodynamic appearance. The swept back look and the knife-edge side strakes emphasize the streamlined shape of the fairing without impeding airflow to the vents or obstructing headlamp light patterns. Available in your choice of finish, the self-adhesive Headlamp Trim can be installed without removing the headlamp or fairing.

Fits '15-later Road Glide models.

BODYGUARD IN A BOTTLE

Oil is the lifeblood of your engine. It not only lubricates the moving parts, but also cools, cleans and flushes away all the byproducts of combustion. It lives in an environment filled with heat, friction and toxins that are determined to break it down and shorten its useful life. And it keeps the heart of your motorcycle beating at idle or at full throttle. Harley-Davidson's complete line of lubricants are formulated specifically to keep your motorcycle running strong, mile after mile.

ENGINE OIL FAQ

What's in a bottle of oil?

- The Base Stock makes up 75-80% of a bottle of oil. Generally, if it comes from the ground, it is a Mineral Oil. And if it is made in a lab or a reactor, it is Synthetic Oil.
- The Additive Pack makes up the remaining 20-25%. These are the ingredients that make oil smarter and tailored to it's application. The additives include:
  - Viscosity Modifiers – lets oil flow like 20 weight oil at start-up and 50 weight oil at operating temperatures
  - Detergents – cleans inside your engine
  - Dispersants – suspends contaminants in the oil so they can be carried to the filter
  - Buffers – neutralizes acids that form in your engine
  - Anti-oxidants – prevents sludge and oil thickening oxidation
  - Corrosion inhibitors – protects internal components from corroding
  - Anti-wear additives – provides protection against internal wear

How often should I change my motorcycle engine oil?

You should change your motorcycle engine oil and engine oil filter at the first 1,000-mile service interval and at every 5,000-mile service interval thereafter. If you ride your motorcycle hard, under dusty conditions or in cold weather, the engine oil and filter should be changed more often. You should always change your engine oil and filter prior to winter storage (or any extended storage) so that your engine oil is clean and free of contaminants during this time period.

What viscosity grade should I use in my Harley Motorcycle?

The recommended viscosity grade for all temperature conditions is SAE 20W50 Harley-Davidson® Motor Oil. The SAE 50 H-D® Motorcycle Oil is satisfactory in ambient temperatures of 60-80°F, and the SAE 60 H-D Motorcycle Oil in ambient temperatures above 80°F. SAE 20W50 covers the broadest range of operating temperatures.

What's the difference between synthetic and petroleum-based lubricants?

Group I, II and III petroleum-based lubricants are derived from oil pumped from the ground. Group IV and V synthetic lubricants are chemically produced in a lab. Petroleum-based lubricants inherit physical components (including contaminants) of the source crude oil in the refining process, while synthetic lubricants are custom-formulated to have desired properties for specific purposes, meaning that engineers have complete control of the lubricant from start to finish – at the molecular level.

What's better in my bike – Petroleum or Synthetic?

Petroleum lubricants have been around for a long time, and are effective at lubricating in most conditions, but mineral oil can't compete with the purity of synthetic lubricants – especially in extreme conditions. Synthetic oil does a better job reducing wear and resisting breakdown under a wider range of operating temperatures.

What does SYN3® full Synthetic Motorcycle Lubricant do for my drivetrain?

SYN3® Full Synthetic Motorcycle Lubricant offers all the benefits of Genuine Harley-Davidson 360 Motorcycle Oil, and:

- Offers superior wear protection at higher temperatures
- Keeps engines, transmissions and primary chaincases cleaner
- Meets the anti-wear lubricity requirements of all transmission gears
- Lubricates all primary chaincase components
- Delivers smooth, sure clutch operation
- Provides long-term protection of all internal components
- Improves seal and gasket performance
- Offers superior performance in high-output engines

What makes Harley SYN3 better than other Synthetics for my Harley?

SYN3 is pure, genuine, full synthetic lubricant.

- SYN3 base stocks are synthesized materials – including Poly Alfa Olefin (PAO) and Esther, which are the most pure, highest quality synthetic base stocks available
- SYN3 has the smartest, most robust additive package developed specifically to provide maximum performance and protection in H-D powertrains

Beware, not all synthetics are created equal.

- Due to a legal loophole, other brands are selling "Highly Refined Group III" mineral oil as synthetic oil
- Head to head, SYN3 outperforms these oils

SYN3 is a product you can trust, from a brand you can trust. Oil is the lifeblood to your Harley-Davidson; don't take chances with anything else.

Why should I use H-D® oil in my Harley?

- No one tests as much as we do – we test on the road, on dynos and in the laboratory
- We accumulate millions of testing miles on our engines and drive trains, using only H-D Oil
- We test in the harshest environments – testing is performed in the extreme heat of the desert
- We test under the most rigorous duty cycles – accelerated durability testing helps explore the limits of our designs, in less time. This is a worst case scenario for oil
- We run thousands of hours on dynos
- We test in the laboratory – sampling and analyzing oil to determine its life and effectiveness during use

H-D's additive package is the best available, it's the most robust, it was created exclusively for H-D powertrains and we are the only ones who have it.

A. SCREAMIN' EAGLE® PERFORMANCE SPARK PLUGS

Screamin' Eagle® Spark Plugs feature double platinum coating for superior erosion resistance and extended life. The "V" trimmed ground electrode reduces shrouding of the flame front to promote flame propagation, and the fine wire center electrode enhances startups and ignitability. Screamin' Eagle Plugs feature Ribbed Core Technology (RCT) that provides resistance to fouling, and are designed with Original Equipment-style noise suppression to prevent electrical interference with radios and CB communication equipment. Works great in racing applications where rich air/fuel conditions are required. Unique style with Screamin' Eagle logo. Sold in pairs.

B. HARLEY-DAVIDSON® GOLD SPARK PLUGS

A special thread and shell coating ensures quick and easy removal from aluminum heads and resists corrosion. A gold palladium insert extends life and improves resistance to corrosion. A. MOTORCYCLE TIRE PRESSURE MONITORING SYSTEM
Proper tire pressure is critical to the operation of your motorcycle. The Harley-Davidson® Tire Pressure Monitoring System (TPMS) takes the hassle out of monitoring your vehicle's front and rear tire pressure manually. The TPMS alerts the rider to low tire pressure as soon as the vehicle is started. While riding, receive low-pressure alerts via your H-D™ Speedo/Tach or via the H-D Connect™ mobile app.

42300124A
Fits '20-later Touring models (except Japan) equipped with Original Equipment or Accessory wheels that accept a TPMS sensor.

B. TIRE PRESSURE GAUGE AND FILL VALVE
Simplify checking the air pressure level and filling the tires on your motorcycle. This Tire Pressure Gauge features an 18" flexible hose and 2-way air chuck with both a 45° fill port and a unique side fill port that provides easy straight-in access to hard-to-reach motorcycle valve stems. The dual-range instant-read gauge measures pressures from 0-60 psi and 0-400 kPa, and is protected from impact and abrasion by a thick rubber collar. Designed to fit an air compressor with a standard 1/4" quick-disconnect coupler, this gauge allows you to check the pressure and fill the tire without removing the chuck from the tire. Just apply the chuck to the valve stem, read the pressure and add air by depressing the comfortable trigger lever. And for checking tire pressure on the road, you can use this tool like any standard tire gauge.

12700096A

C. COMPACT AIR COMPRESSOR WITH LIGHT
Correct tire pressure is crucial to safe operation and long tire life, but checking the pressure, finding a gas station with a working air pump and filling the tire is a chore that many of us ignore. The Compact Air Compressor is designed to simplify this necessary procedure. The compact, lightweight 12V pump is designed for life on the road. The all-in-one pump plugs into your bike's battery charging harness, and features a built-in 0-160 psi pressure gauge and bright LED work light. The 11" air hose and 6' fuse-protected power cord easily reach the front and rear wheels, and are stored in convenient compartments when not in use. The lightweight pump features durable, impact-resistant construction, and is small enough to fit easily in a saddlebag or strap-on luggage. Kit includes pump, valve stem extension and nylon carrying bag.

D. VALVE STEM EXTENSION
Sometimes there's just not enough space around the tire's valve stem for the gas station air chuck and hose to reach. Brake rotors, sprockets and saddlebags get in the way and keep the air chuck from making an airtight seal. When that happens, this Valve Stem Extension provides easy access. Simply screw the extension in place on the stem, fill the tire to the proper pressure, remove the extension and replace the valve stem cap. Then toss the extension in your saddlebag or tool roll for the next time.

42300009

E. COMPACT TIRE GAUGE AND TREAD DEPTH INDICATOR
Combination dial air pressure and tread depth gauge provides easy access to the valve stem. A durable internal diaphragm provides accurate air pressure readings with a dual range indicator for 0-60 psi and 0-400 kPa readings. The pressure relief valve is activated by a push button to eliminate inner gauge air pressure after use. The integrated tire tread depth gauge features a dual-range color-coded indicator, calibrated in 1/32" (0-14/32") and millimeters (0-11mm), for monitoring tread wear. A protective rubber boot covers the housing to protect the gauge from impact and abrasion.

75008-02A Compact.

75137-98B
Compact with braided stainless steel lead.

F. DIGITAL TIRE PRESSURE GAUGE
Back-lit Digital Tire Pressure Gauge is easy to read at any time of day. Providing accurate pressure readings in 0.50 psi increments up to 60 psi. Scale can be changed to read psi, bar, Kg or kPa pressure with the touch of a button. This versatile gauge features a 12" braided line and 90 degree angle chuck for easy access to valve stems, and a tough rubber jacket to protect the gauge from damage. Batteries are included.

75158-10

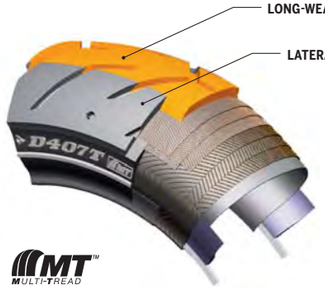

G. TIRE GAUGE AND TREAD DEPTH INDICATOR WITH EMBOSSED LEATHER POUCH
Chrome-plated steel gauge housing with Harley-Davidson script and 90 degree air chuck. Dual range indicator for air pressure and tire tread depth readings. Calibrated for 10-50 psi and 0-32/32" tread depth readings. Rotate the indicator shaft 90 degrees in the housing for 70-345 kPa and 0-30mm tread depth readings. Complete with a Bar & Shield logo embossed leather pouch.

DUNLOP® · HARLEY-DAVIDSON® TIRES

D407/D407T/D408 TOURING

The D407/D408 tire is constructed for '09-later FL Touring, select Softail® and specific Custom Vehicle Operations™ (CVO™) models and is available exclusively through Harley-Davidson® Dealers. The FL Touring rear tires feature Dunlop's advanced MT Multi-Tread™ technology.

- Tire features bold Harley-Davidson script on the sidewall.
- MT Multi-Tread rear tire incorporates a tough tread compound in the center that runs cooler to provide stability, excellent traction under braking and long life and to each side is a section of lateral-grip compound that enhances traction at higher lean angles for great grip while cornering.
- Reinforced multi-layer tire carcass gives the tire strength for long life and provides stability at highway speeds and maximum lean angles.
- Bold, angled lateral grooves in the tread pattern evacuate water from the contact patch on wet roads.
- The D407/D408 is available in blackwall, slim white and wide white sidewall styles.
- The D407T is only available in blackwall style.

ONE-YEAR OVER-THE-COUNTER PARTS AND ACCESSORIES WARRANTY

Harley-Davidson warrants that street legal Genuine Motor Parts ("Parts") and street legal Genuine Motor Accessories ("Accessories") that are purchased on or after January 1, 2012 through an authorized dealer will be free from factory defects, under normal use and service, for a period of one year starting from the date of retail sale and delivery (not date of installation). Because this limited warranty covers only Parts and Accessories, labor is not covered. This limited parts warranty does not cover defects or damage due to abuse, misuse or improper installation. This parts warranty applies to Parts and Accessories you or an aftermarket shop have installed, but only for defects in manufacturing — not conditions caused by the improper installation.

This Parts and Accessories warranty is separate and distinct from the limited factory warranty that applies to your stock motorcycle. This Parts and Accessories warranty does not extend or modify the factory warranty that applies to your motorcycle. It only covers the street legal Genuine Motor Parts and street legal Genuine Motor Accessories added to your motorcycle.

This Parts and Accessories warranty does not cover defects, damage or premature wear to your motorcycle that are caused by the installation or use of Parts and Accessories, even those installed by an authorized dealership. Examples include, but are not limited to performance-enhancing powertrain components or software, exhaust systems, non-approved tires, lowering kits, handlebars, add-ons connected to the factory electrical system, etc.

The fact that Parts or Accessories are labeled or branded Harley-Davidson, or are sold or installed by an authorized dealership, does not necessarily make them appropriate or warranted for the make and model of your motorcycle. The use of Parts and Accessories not designed and tested for your motorcycle may have negative consequences on the performance of your motorcycle and may create conditions not covered by the limited factory warranty.

The remedy for breach of this limited Parts and Accessories warranty is expressly limited to the repair or replacement of any component that proves to be defective, and does not extend or create liability for consequential damages, costs or expenses, including loss of time, inconvenience, or loss of use of the motorcycle. Any implied warranty, including warranty of merchantability or fitness for a particular purpose, is expressly limited to the duration of this limited one-year Parts and Accessories warranty, or to the shortest duration permitted by the laws in your state.

EXCLUDED COMPONENTS:
All Genuine Motor Parts & Accessories will qualify for the one-year over-the-counter warranty, with the following exceptions:

- Tires
- Chemicals
- Premium Luggage (two years)
- Audio and Navigation (two years where applicable)
- Non-street legal components (including Screamin' Eagle® Pro)
- Anything with a manufacturer/factory warranty
- Other disposable and consumable items

To obtain warranty service, return the affected component(s) with proof of purchase, at your expense, within the limited warranty period to an authorized Harley-Davidson® dealer.
